1 Safety

Prior to handling the machine, this instruction manual should be read and understood. If anything needs to be clarified, please contact your Busch representative.

Read this manual carefully before use and keep for future reference.

This instruction manual remains valid as long as the customer does not change anything on the product.

The machine is intended for industrial use. It must be handled only by technically trained personnel.

Always wear appropriate personal protective equipment in accordance with the local regulations.

The machine has been designed and manufactured according to state-of-the-art methods. Nevertheless, residual risks may remain. This instruction manual highlights potential hazards where appropriate. Safety notes and warning messages are tagged with one of the keywords DANGER, WARNING, CAUTION, NOTICE and NOTE as follows:

⚠️ DANGER
... indicates an imminent dangerous situation that will result in death or serious injuries if not prevented.

⚠️ WARNING
... indicates a potentially dangerous situation that could result in death or serious injuries.

⚠️ CAUTION
... indicates a potentially dangerous situation that could result in minor injuries.

⚠️ NOTICE
... indicates a potentially dangerous situation that could result in damage to property.

ℹ️ NOTE
... indicates helpful tips and recommendations, as well as information for efficient and trouble-free operation.

**NOTE**

Technical term.
In this instruction manual, we consider that the term ‘machine’ refers to the ‘vacuum pump’. 
2.1 Operating Principle

The machine works on the rotary vane principle. The oil seals the gaps, lubricates the vanes and takes away compression heat. The oil filter cleans the circulating oil. Exhaust filters separate the oil from the discharged gas.

2.2 Application

The machine is intended for the suction of air and other dry, non-aggressive, non-toxic and non-explosive gases. Conveying of other media leads to an increased thermal and/or mechanical load on the machine and is permissible only after a consultation with Busch. The machine is intended for the placement in a non-potentially explosive environment. The machine is designed for indoor installation, in case of outdoor installation, ask your Busch representative in order to take specific precautions. The machine is capable of maintaining ultimate pressure, see Technical Data [29]. The machine is suitable for continuous operation. Permitted environmental conditions, see Technical Data [29].

2.3 Start Controls

The machine comes without start controls. The control of the machine is to be provided in the course of installation. The machine can be optionally equipped with a starter unit or a variable-frequency drive.

2.4 Standard Accessories

2.4.1 Temperature Switch "Gas"

The temperature switch monitors the gas temperature of the machine. The machine must be stopped when the gas reaches 110 °C.
2.5 Optional Accessories

2.5.1 Gas Ballast Valve
The gas ballast valve mixes the process gas with a limited quantity of ambient air to counteract the condensation of vapour inside the machine.
The gas ballast valve has an influence on the ultimate pressure of the machine, see Technical Data [► 29].

2.5.2 Inlet Filter
The inlet filter protects the machine against dust and other solids in the process gas. The inlet filter is available with a paper or polyester cartridge.

2.5.3 Water-oil Heat Exchanger
In case of unfavourable ambient conditions a water-oil heat exchanger can be provided.
See Cooling Water Connection (Optional) [► 11].

2.5.4 Temperature Switch "Oil"
The temperature switch monitors the oil temperature of the machine.
Depending on the oil type, the machine must be stopped when the oil reaches a certain temperature, see Oil [► 30].

2.5.5 Resistance Thermometer
The resistance thermometer monitors the oil temperature of the machine.
Depending on the oil type, warning and trip signals must be set, see Oil [► 30].

2.5.6 Level and Temperature Switch
The level switch with integrated temperature switch monitors the oil level and the oil temperature. It has one level switch point and two temperature switch points.
The machine must be stopped when the oil level is too low or, depending on the oil type, when the oil reaches a certain temperature, see Oil [► 30].

2.5.7 Pressure Switch
The pressure switch monitors the pressure in the oil separator.
The machine must be stopped when the gas reaches a certain pressure, see Wiring Diagram Pressure Switch (Optional) [► 17].

2.5.8 Pressure Transmitter
The pressure transmitter monitors the pressure in the oil separator.
Warning and trip signals must be set, see Wiring Diagram Pressure Transmitter (Optional) [► 17].
3 Transport

**WARNING**

Suspended load.

Risk of severe injury!

- Do not walk, stand or work under suspended loads.

**NOTICE**

In case the machine is already filled with oil.

**WARNING**

Lifting the machine using the motor eye bolt.

Risk of severe injury!

- Do not lift the machine using the eye bolt fitted to the motor. Only lift the machine as previously shown.

- Check the machine for transport damage.

If the machine is secured to a base plate:

- Remove the machine from the base plate.
4 Storage

- Seal all apertures with adhesive tape or reuse provided caps.

Version with water-oil heat exchanger:

- Make sure that the cooling water has been completely removed, see Decommissioning [► 25].

If the machine is to be stored for more than 3 months:

- Wrap the machine in a corrosion inhibiting film.
- Store the machine indoors, dry, dust free and if possible in original packaging preferably at temperatures between 0 ... 40 °C.

5 Installation

5.1 Installation Conditions

⚠️ NOTICE

Use of the machine outside of the permitted installation conditions.

Risk of premature failure!
Loss of efficiency!

- Take care that the installation conditions are fully complied with.

- Make sure that the environment of the machine is not potentially explosive.
- Make sure that the ambient conditions comply with the Technical Data [► 29].
- Make sure that the environmental conditions comply with the protection class of the motor and the electrical instruments.
- Make sure that the installation space or location is vented such that sufficient cooling of the machine is provided.
- Make sure that cooling air inlets and outlets are not covered or obstructed and that the cooling air flow is not affected adversely in any other way.
- Make sure that the oil sight glass (OSG) remains easily visible.
- Make sure that enough space remains for maintenance work.
- Make sure that the machine is placed or mounted horizontally, a maximum of 1° in any direction is acceptable.
- Check the oil level, see Oil Level Inspection [► 21].
- Make sure that all provided covers, guards, hoods, etc. are mounted.
Version with water-oil heat exchanger:

- Make sure that the cooling water complies with the requirements, see Cooling Water Connection (Optional) [► 11].

If the machine is installed at an altitude greater than 1000 meters above sea level:

- Contact your Busch representative, the motor should be derated or the ambient temperature limited.

If the machine is equipped with monitoring devices or sensors:

- Make sure that the monitoring devices are correctly connected and integrated into a control system such that operation of the machine will be inhibited if the safety limit values are exceeded, see Electrical Connection of the Monitoring Devices [► 16].

5.2 Connecting Lines / Pipes

- Remove all protective caps before installation.
- Make sure that the connection lines cause no stress on the machine’s connection; if necessary use flexible joints.
- Make sure that the line size of the connection lines over the entire length is at least as large as the connections of the machine.

In case of very long connection lines it is advisable to use larger line sizes in order to avoid a loss of efficiency. Seek advice from your Busch representative.

5.2.1 Suction Connection

⚠️ WARNING

Unprotected suction connection.

Risk of severe injury!

- Do not put hand or fingers in the suction connection.

⚠️ NOTICE

Ingress of foreign objects or liquids.

Risk of damage to the machine!

If the inlet gas contains dust or other foreign solid particles:

- Install a suitable filter (5 micron or less) upstream from the machine.

Connection size:
- G3

Depending on the specific order, other connection dimensions may apply.

If the machine is used as part of a vacuum system:

- Busch recommends the installation of an isolation valve in order to prevent the oil from flowing back to the vacuum system.
5.2.2 Discharge Connection

**CAUTION**

The discharge gas contains small quantities of oil.

*Risk to health!*

If air is discharged into rooms where persons are present:

- Make sure that sufficient ventilation is provided.

Connection size:
- G3 or no dimension (grid)

Depending on the specific order, other connection dimensions may apply.

- Make sure that the discharged gas will flow without obstruction. Do not shut off or throttle the discharge line or use it as a pressurised air source.

Unless the aspirated air is discharged to the environment right at the machine:

- Make sure that the discharge line either slopes away from the machine or provide a liquid separator or a siphon with a drain cock, so that no liquids can flow back into the machine.

5.2.3 Cooling Water Connection (Optional)

**Water-oil heat exchanger without inlet accessories**

**Water-oil heat exchanger with inlet accessories**

<table>
<thead>
<tr>
<th>CWI</th>
<th>Cooling water inlet</th>
<th>PS</th>
<th>Pressure switch</th>
</tr>
</thead>
<tbody>
<tr>
<td>CWO</td>
<td>Cooling water outlet</td>
<td>WBV</td>
<td>Water bypass valve</td>
</tr>
<tr>
<td>WHE</td>
<td>Water-oil heat exchanger</td>
<td>WF</td>
<td>Water filter</td>
</tr>
<tr>
<td>TV</td>
<td>Thermostatic valve</td>
<td>MV</td>
<td>Solenoid valve</td>
</tr>
</tbody>
</table>

The thermostatic valve (TV) is used to control the water flow in order to keep a stable machine temperature.

The factory default adjustment of the thermostatic valve (TV) is set in position 2 (approx. 75°C oil temperature).

The pressure switch (PS) is used to monitor the presence of water at the cooling system of the machine.
When the pressure switch detects a pressure lower than 2 bar, the machine must be stopped.

The water bypass valve (WBV) is used at the first machine start-up. At that moment it should be open (approx. 90 seconds) to prime the water heat exchanger, afterwards it should be closed.

The solenoid valve (MV) is used to stop the cooling water circulation when the machine is not running:
- Connect the cooling water connections (CWI / CWO) to the water supply.

Connection size:
- 19 mm hose (CWI / CWO)
- If necessary, electrically connect the pressure switch (PS), see Wiring Diagram Pressure Switch of Water-oil Heat Exchanger (Optional) [► 17].
- If necessary, electrically connect the solenoid valve (MV).
- Make sure that the cooling water complies with the following requirements:

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Min. supply capacity</td>
<td>l/min 5</td>
</tr>
<tr>
<td>Water pressure</td>
<td>bar 2 ... 6</td>
</tr>
<tr>
<td>Supply temperature</td>
<td>°C +5 ... +35</td>
</tr>
<tr>
<td>Required pressure differential across supply and return</td>
<td>bar ≥ 1</td>
</tr>
</tbody>
</table>

- To reduce the maintenance effort and ensure a long product lifetime we recommend the following cooling water quality:

<table>
<thead>
<tr>
<th>Quality parameter</th>
<th>Quality value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hardness</td>
<td>mg/l (ppm) &lt; 90</td>
</tr>
<tr>
<td>Properties</td>
<td>Clean &amp; clear</td>
</tr>
<tr>
<td>PH value</td>
<td>7 ... 8</td>
</tr>
<tr>
<td>Particle size</td>
<td>µm &lt; 200</td>
</tr>
<tr>
<td>Chloride</td>
<td>mg/l &lt; 100</td>
</tr>
<tr>
<td>Electrical conductivity</td>
<td>µS/cm ≤ 100</td>
</tr>
<tr>
<td>Free chloride</td>
<td>mg/l &lt; 0.3</td>
</tr>
<tr>
<td>Materials in contact with the cooling water</td>
<td>Stainless steel, copper and cast iron</td>
</tr>
</tbody>
</table>

**NOTE**

Water hardness unit conversion.

1 mg/l (ppm) = 0.056 °dh (german degree) = 0.07 °e (english degree) = 0.1 °fH (french degree)

### 5.3 Filling Oil

**NOTICE**

Use of an inappropriate oil.

**Risk of premature failure!**

**Loss of efficiency!**
- Only use an oil type which has previously been approved and recommended by Busch.
For oil type and oil capacity see Technical Data [► 29] and Oil [► 30].

5.4 Fitting the Coupling

<table>
<thead>
<tr>
<th>Machine type</th>
<th>Coupling size</th>
<th>Value “E” (mm)</th>
<th>Value “L” (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>RA/RC 0400 C</td>
<td>BoWex® M-65</td>
<td>4</td>
<td>114</td>
</tr>
<tr>
<td>RA/RC 0502 C</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>RA/RC 0630 C</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

In case of a machine delivery without motor:

- Fit the second coupling hub on the motor shaft (separately delivered).
- Axially adjust the sleeve in such a way until value “E” (or “L”) is reached.
- When the coupling adjustment is done, lock the coupling hub by tightening the radial screw.
- Mount the motor on the machine by including the coupling sleeve.

For further coupling information, go to www.ktr.com and download the instruction manual of the BoWex® coupling.
5.5 Electrical Connection

**DANGER**

Live wires.

Risk of electrical shock.

- Electrical installation work must only be executed by qualified personnel.

**NOTE**

The operation with variable speed, i.e. with a variable-frequency drive or a soft starter unit, is allowed as long as the motor is admitted and the permitted motor speed range is neither underrun nor exceeded (see Technical Data [► 29]).

Seek advice from your Busch representative.

- Make sure that the power supply for the motor is compatible with the data on the nameplate of the motor.
- The electrical installation must comply with applicable national and international standards.
- Provide a lockable disconnect switch on the power line so that the machine is completely secured during maintenance tasks.
- Provide an overload protection according to EN 60204-1 for the motor.
  - Busch recommends installing a D-curve circuit breaker.
- Make sure that the motor of the machine will not be affected by electric or electromagnetic disturbance from the mains; if necessary seek advice from Busch.
- Connect the protective earth conductor.
- Electrically connect the motor.

**NOTICE**

Incorrect connection.

Risk of damage to the motor!

- The wiring diagrams given below are typical. Check the inside of the terminal box for motor connection instructions/diagrams.
5.5.1 Wiring Diagram Three-Phase Motor

Delta connection (low voltage):

![Diagram]

Star connection (high voltage):

![Diagram]

Double star connection, multi-voltage motor with 12 pins (low voltage):

![Diagram]

Star connection, multi-voltage motor with 12 pins (high voltage):

![Diagram]

Delta connection, multi-voltage motor with 12 pins (middle voltage):

![Diagram]

NOTICE

Incorrect direction of rotation.

Risk of damage to the machine!

• Operation in the wrong direction of rotation can destroy the machine in a short time! Prior to start-up, ensure that the machine is operated in the right direction.

• Determine the intended direction of rotation with the arrow (stuck on or cast).
• Jog the motor briefly.
• Watch the fan wheel of the motor and determine the direction of rotation just before the fan wheel stops.

If the rotation of the motor must be changed:

• Switch any two of the motor phase wires.
5.6 Electrical Connection of the Monitoring Devices

NOTE
In order to prevent potential nuisance alarms, Busch recommends that the control system is configured with a time delay of at least 20 seconds.

5.6.1 Wiring Diagram Temperature Switch "Gas"
Part no.: 0651 563 747
Connector: M12x1, 4-pin
Electrical data:
U = ≤ 250 V AC/DC (50/60 Hz) ; I = ≤ 1 A
Switch point: T₁, pin 1 + 2 = 110 °C
1 = Brown ; 2 = White ;
3 = Blue ; 4 = Black

5.6.2 Wiring Diagram Temperature Switch "Oil" (Optional)
Part no.: 0651 563 747
Connector: M12x1, 4-pin
Electrical data:
U = ≤ 250 V AC/DC (50/60 Hz) ; I = ≤ 1 A
Switch point:
T₁, pin 1 + 2 = 110 °C*
T₂, pin 3 + 4 = 130 °C*
1 = Brown ; 2 = White ;
3 = Blue ; 4 = Black
* The switch point value depends on the oil type, see Oil [► 30].

5.6.3 Wiring Diagram Resistance Thermometer (Optional)
Part no.: 0651 563 753
Connector: M12x1, 4-pin
Electrical data:
U = 10 ... 35 VDC
4 ... 20 mA ► 0 ... 150 °C
1 = Brown ; 3 = Blue
Warning / trip signals: see Oil [► 30].

5.6.4 Wiring Diagram Level and Temperature Switch (Optional)
Part no.: 0652 563 748
Connector: M12x1, 4-pin
Electrical data:
U = 230 V AC (50/60 Hz) ;
U = 100 V DC (50/60 Hz) ;
I = 0.5 A
Switch point:
L pin 1 + 4 = low level
T₁, pin 1 + 2 = 110 °C*
T₂, pin 1 + 3 = 130 °C*
1 = Brown ; 2 = White ;
3 = Blue ; 4 = Black
NOTE: For this device, the recommended time delay to prevent nuisance alarms can be up to 240 seconds.
* The switch point value depends on the oil type, see Oil [► 30].
5.6.5 Wiring Diagram Pressure Switch (Optional)

Part no.: 0653 563 750
Connector: M12x1, 4-pin
Electrical data:
U = ≤ 250 V AC/DC (50/60 Hz) ; I = ≤ 4 A
Switch point:
P pin 1 + 2 = 0.6 bar (overpressure)

1 = Brown ; 2 = White

5.6.6 Wiring Diagram Pressure Transmitter (Optional)

Part no.: 0653 204 444
Connector: M12x1, 4-pin
Electrical data:
U = 10 ... 35 VDC
4 ... 20 mA ➔ 0 ... 1.6 bar (abs.)
Warning signal:
P_{warning} = 0.4 bar (overpressure)

Trip signal:
P_{trip} = 0.6 bar (overpressure)

1 = Brown ; 3 = Blue

5.6.7 Wiring Diagram Pressure Switch of Water-oil Heat Exchanger (Optional)

Part no.: 0653 000 002
Electrical data:
U = 230 VAC ; I = 1 A
U = 24 ... 100 VDC ; I = 0.5 ... 2 A
Contact: Normally open
Switch point:
P_{trip} = 2 bar (relative) ➔ min. admissible pressure

P ➔ PE
6 Commissioning

**NOTICE**

The machine can be shipped without oil.

**Operation without oil will ruin the machine in short time!**

- Prior to commissioning, the machine must be filled with oil, see Filling Oil [⇒ 12].

**CAUTION**

During operation the surface of the machine may reach temperatures of more than 70°C.

**Risk of burns!**

- Avoid contact with the machine during and directly after operation.

**CAUTION**

Noise of running machine.

**Risk of damage to hearing!**

If persons are present in the vicinity of a non noise insulated machine over extended periods:

- Make sure that ear protection is being used.
- Make sure that the installation conditions (see Installation Conditions [⇒ 9]) are met.

Version with water-oil heat exchanger:

- Turn on the water supply.
- If the cooling water inlet is equipped with a water bypass valve (WBV), open it for approx. 90 seconds before the first machine start-up.
- Make sure that cooling water requirements are fully complied with, see Cooling Water Connection (Optional) [⇒ 11].
- Switch on the machine.
- Make sure that the maximum permissible number of starts does not exceed 12 starts per hour. Those starts should be spread within the hour.
- Make sure that the operating conditions comply with the Technical Data [⇒ 29].
- After a few minutes of operation, check the oil level and top up if necessary.

As soon as the machine is operated under normal operating conditions:

- Measure the motor current and record it as reference for future maintenance and troubleshooting work.
6.1 Conveying Condensable Vapours

Water vapour within the gas flow is tolerated within certain limits. The conveyance of other vapours shall be agreed upon with Busch.

If condensable vapours are to be conveyed:

* Close the isolation valve* and open the gas ballast valve** (GB)

• Warm up the machine

• Close the isolation valve and perform the process

• Close the gas ballast valve

• Close the isolation valve

30 minutes

* not included in the scope of delivery

** may be considered as optional on certain products

7 Maintenance

⚠️ WARNING

Machines contaminated with hazardous material.

Risk of poisoning!

Risk of infection!

If the machine is contaminated with hazardous material:

• Wear appropriate personal protective equipment.

⚠️ CAUTION

Hot surface.

Risk of burns!

• Prior to any action requiring touching the machine, let the machine cool down first.

⚠️ NOTICE

Using inappropriate cleaners.

Risk of removing safety stickers and protective paint!

• Do not use incompatible solvents to clean the machine.

⚠️ CAUTION

Failing to properly maintain the machine.

Risk of injuries!

Risk of premature failure and loss of efficiency!

• Respect the maintenance intervals or ask your Busch representative for service.
• Shut down the machine and lock against inadvertent start up.

• Vent the connected lines to atmospheric pressure.

Version with water-oil heat exchanger:

• Turn off the water supply.

If necessary:

• Disconnect all connections.

7.1 Maintenance Schedule

The maintenance intervals depend very much on the individual operating conditions. The intervals given below are desired to be considered as starting values which should be shortened or extended as appropriate. Particularly harsh applications or heavy duty operation, such as high dust loads in the environment or in the process gas, other contamination or ingress of process material, can make it necessary to shorten the maintenance intervals significantly.

<table>
<thead>
<tr>
<th>Maintenance work</th>
<th>Interval</th>

<tr>
<td>• Contact Busch for an inspection. If required, overhaul the machine.</td>
<td>Every 5 years</td>
</tr>
</tbody>
</table>

* Service interval for synthetic oil, shorten the interval when using mineral oil, contact Busch Service
7.2 Oil Level Inspection

- Shut down the machine.
- When the machine is stopped, wait 1 minute before checking the oil level.

![Oil Level Indicators]

- Fill up if necessary, see Oil Filling [12].

7.3 Oil and Oil Filter Change

[NOTICE]

Use of an inappropriate oil.
Risk of premature failure!
Loss of efficiency!

- Only use an oil type which has previously been approved and recommended by Busch.

![Drain Pan and O-Ring Diagram]

7.5 Air Heat Exchanger Cleaning
8 Overhaul

**NOTICE**

Improper assembly.

Risk of premature failure!

Loss of efficiency!

- It is highly recommended that any dismantling of the machine that goes beyond anything that is described in this manual should be done through Busch.

**WARNING**

Machines contaminated with hazardous material.

Risk of poisoning!

Risk of infection!

If the machine is contaminated with hazardous material:

- Wear appropriate personal protective equipment.

In case of the machine having conveyed gas that was contaminated with foreign materials which are dangerous to health:

- Decontaminate the machine as much as possible and state the contamination status in a ‘Declaration of Contamination’.

Busch will only accept machines that come with a completely filled in and legally binding signed ‘Declaration of Contamination’.

(Form downloadable from www.buschvacuum.com)

9 Decommissioning

- Shut down the machine and lock against inadvertent start up.
- Vent the connected lines to atmospheric pressure.

Version with water-oil heat exchanger:

- Turn off the water supply.
- Disconnect the water supply.
- Open the water bypass valve (WBV).
- Blow through the water cooling inlet with compressed air.
- Disconnect all connections.

If the machine is going to be stored:

- See Storage [› 9].

9.1 Dismantling and Disposal

- Drain the oil.
- Remove the exhaust filters.
- Remove the oil filter.
- Separate special waste from the machine.
- Dispose of special waste in compliance with applicable regulations.
- Dispose of the machine as scrap metal.
10 Spare Parts

NOTICE
Use of non-Busch genuine spare parts.
Risk of premature failure!
Loss of efficiency!

- The exclusive use of Busch genuine spare parts and consumables is recommended for the correct functioning of the machine and to validate the warranty.

<table>

If other parts are required:

- Contact your Busch representative for the detailed spare parts list.
11 Troubleshooting

⚠️ DANGER

Live wires.

**Risk of electrical shock.**
- Electrical installation work must only be executed by qualified personnel.

⚠️ CAUTION

Hot surface.

**Risk of burns!**
- Prior to any action requiring touching the machine, let the machine cool down first.

Illustration showing parts that may be involved during troubleshooting:

* On RA version only

</table>

In case of unfavourable ambient temperature, other oil viscosities may be used. Please consult your Busch representative for more details.

To know which oil has been filled in the machine, please refer to the nameplate (NP).
14 EU Declaration of Conformity

This Declaration of Conformity and the CE-mark affixed to the nameplate are valid for the machine within the Busch scope of delivery. This Declaration of Conformity is issued under the sole responsibility of the manufacturer. When this machine is integrated into a superordinate machinery the manufacturer of the superordinate machinery (this can be the operating company, too) must conduct the conformity assessment process for the superordinate machine or plant, issue the Declaration of Conformity for it and affix the CE-mark.

The manufacturer

Ateliers Busch S.A.
Zone Industrielle
CH-2906 Chevenez

declares that the machine(s): R 5 RA/RC 0400 C; RA/RC 0502 C ; RA/RC 0630 C
has (have) been manufactured in accordance with the European Directives:

- ‘Machinery’ 2006/42/EC
- ‘Electromagnetic Compatibility’ 2014/30/EU

and following the standards.
