1 Safety

Prior to handling the machine this instruction manual should be read and understood. If anything needs to be clarified please contact your Busch representative. Read carefully before use and keep for future reference.

This instruction manual remains valid as long as the customer does not change anything on the product.

The machine is intended for industrial use. It must be handled only by technically trained personnel.

The machine has been designed and manufactured according to state-of-the-art methods. Nevertheless, residual risks may remain. This instruction manual highlights potential hazards where appropriate. Safety notes and warning messages are tagged with one of the keywords DANGER, WARNING, CAUTION, NOTICE and NOTE as follows:

⚠️ DANGER

... indicates an imminent dangerous situation that will result in death or serious injuries if not prevented.

⚠️ WARNING

... indicates a potentially dangerous situation that could result in death or serious injuries.

⚠️ CAUTION

... indicates a potentially dangerous situation that could result in minor injuries.

⚠️ NOTICE

... indicates a potentially dangerous situation that could result in damage to property.

ℹ️ NOTE

... indicates helpful tips and recommendations, as well as information for efficient and trouble-free operation.

NOTE

Technical term.
In this instruction manual, we consider that the term 'machine' refers to the 'vacuum pump'.
2.1 Operating Principle

The machine works on the two-stage rotary vane principle. The oil seals the gaps, lubricates the vanes and takes away compression heat.

2.2 Application

The machine is intended for the suction of air and other dry, non-aggressive, non-toxic and non-explosive gases.

Conveying of other media leads to an increased thermal and/or mechanical load on the machine and is permissible only after a consultation with Busch.

The machine is intended for the placement in a non-potentially explosive environment.

The machine is capable of maintaining ultimate pressure.

The machine is suitable for continuous operation under certain conditions, see Continuous Operation [13].

Permitted environmental conditions see Technical Data [23].

**NOTICE**

Chemical compatibility of the process gases with the machine component materials.

Risk of corrosion inside the compression chamber which can reduce performance and its lifetime!

- Check if the process gases are compatible with those following materials:
  - Cast iron
  - Steel
  - Aluminium
  - Fluoroelastomer (FKM/FPM)

- In doubt, please contact your Busch representative.

2.3 Standard Features

2.3.1 Gas Ballast Valve

It mixes the process gas with a limited quantity of ambient air to counteract the condensation of vapour inside the machine.
2.4 Optional Accessories

2.4.1 Inlet Filter
It protects the machine against dust and other solids in the process gas. The inlet filter is available with a polyester cartridge.

2.4.2 Oil Mist Separator
To reduce the oil consumption and trap any oil mist, when operating at a high suction pressure, it is recommended to fit an oil mist separator at the discharge connection (OUT).
To allow the oil to return to the machine in continuous operation, please comply with the conditions for Continuous Operation [13].

2.5 Motor Variants
The Zebra RH 0003-0021 B are equipped with multi-voltages and multi-frequencies motors (50 Hz/60 Hz).
They can be delivered either with a single-phase or three-phase motor, except for RH 0003 B which is only available with a single-phase motor.

3 Transport

⚠️ WARNING
Suspended load.
Risk of severe injury!
• Do not walk, stand or work under suspended loads.

⚠️ CAUTION
Handle the machine by hand.
Risk to injury!
• Do not lift by hand a machine heavier than 20 kg.
• Follow all safety provisions in order to prevent an accident.

‼️ NOTICE
In case the machine is already filled with oil.
Tilting a machine that is already filled with oil can cause large quantities of oil to ingress into the cylinder. Starting the machine with excessive quantities of oil in the cylinder will immediately break the vanes and ruin the machine!
• Drain the oil prior to every transport or always horizontally transport the machine.
4 Storage

• Check the machine for transport damage.
In case of the machine being secured to a base plate:
  • Remove the fixations.

5 Installation

5.1 Installation Conditions

• Make sure that the environment of the machine is not potentially explosive.
• Make sure that the ambient conditions comply with the Technical Data [23].
• Make sure that the environmental conditions comply with the protection class of the motor.
- Make sure that the installation space or location is vented such that sufficient cooling of the machine is provided.
- Make sure that cooling air inlets and outlets of the motor fan are not covered or obstructed and that the cooling air flow is not affected adversely in any other way.
- Make sure that the oil sight glass (OSG) or the oil level indicator (OLI) remains easily visible.
- Make sure that enough space remains for maintenance work.
- Make sure that the machine is placed or mounted horizontally, a maximum of 1° in any direction.
- Check the oil level, fill up if necessary, see Filling Oil. 
- Make sure that all provided covers, guards, hoods, etc. are mounted.

If the machine is installed at an altitude greater than 1000 meters above sea level:

- Contact your Busch representative, the motor should be derated or the ambient temperature limited.

### 5.2 Connecting Lines / Pipes

- Make sure that the connection lines cause no stress on the machine’s connection, if necessary use flexible joints.
- Make sure that the line size of the connection lines over the entire length is at least as large as the connections of the machine.

In case of very long connection lines it is advisable to use larger line sizes in order to avoid a loss of efficiency. Seek advice from your Busch representative.

---

**WARNING**

Internal pressure higher than 300 hPa (gauge).

**Risk of severe injury!**

**Risk of damage to the machine!**

- Make sure that the discharge line is not clogged (either pipe or oil mist separator).

### 5.2.1 Suction Connection

---

**WARNING**

Unprotected suction connection.

**Risk of severe injury!**

- Do not put hand or fingers in the suction connection.

---

**NOTICE**

Intruding foreign objects or liquids.

**Risk of damage to the machine!**

In case of the inlet gas contains dust or other foreign solid particles:

- Install a suitable filter (5 micron or less) upstream the machine.

**Connection size:**

- ISO-KF 25
5.2.2 Discharge Connection

**CAUTION**

The discharge gas contains small quantities of oil.

*Risk to health!*

If air is discharged into rooms where persons are present:

- Make sure that sufficient ventilation is provided.

Connection size:

- ISO-KF 25
- G3/4 (without ISO-KF adapter) for RH 0003 B
- G1 (without ISO-KF adapter) for RH 0010-0021 B

- Make sure that the discharged gas will flow without obstruction. Do not shut off or throttle the discharge line or use it as a pressurised air source.

Unless the aspirated air is discharged to the environment right at the machine:

- Make sure that the discharge line either slopes away from the machine or provide a liquid separator or a drip leg with a drain cock, so that no liquids can flow back into the machine.

5.2.3 Oil Mist Separator (Optional)

The oil mist separator has to be fitted at the discharge connection.

- Remove the ISO-KF adapter.
- Mount the oil mist separator with its seal.

---

| OMS 0003 | Oil mist separator for RH 0003 B |
| OMS 0021 | Oil mist separator for RH 0010-0021 B |
| OUT      | Discharge                        |
5.3 Filling Oil

For oil type and oil capacity see Technical Data [p. 23] and Oil [p. 23].

Oil filling for RH 0003-0015 B:

1. [Diagram showing oil filling process]
2. [Check the o-ring if it is correctly seated in the groove]
3. [Check oil level]

Oil filling for RH 0021 B:

1. [Diagram showing oil filling process]
2. [Check the o-ring if it is correctly seated in the groove]
3. [Check oil level]
5.4 Electrical Connection

**DANGER**

Live wires.

**Risk of electrical shock.**
- Electrical installation work must only be executed by qualified personnel.

- Make sure that the power supply for the motor is compatible with the data on the nameplate of the motor.
- Provide an overload protection according to EN 60204-1 for the motor.
- Make sure that the motor of the machine will not be affected by electric or electromagnetic disturbance from the mains; if necessary seek advice from Busch.
- Connect the protective earth conductor.
- Electrically connect the motor.

**NOTICE**

Incorrect connection.

**Risk of damage to the motor!**
- The wiring diagrams given below are typical. Check the inside of the terminal box for motor connection instructions/diagrams.

5.4.1 Wiring Diagram Single-Phase Motor

The motor is equipped with an auto reset thermal protector that turns off the machine at 120 ±5 °C.

If the protector has been activated:
- Solve the problem (see Troubleshooting [21]).
- Let the motor cool down until a temperature of 78 ±9 °C.
- Restart the machine.

For RH 0003 B:
- Electrically connect the motor according to the following wiring diagram:

Connector type: Quick-connect terminal (#250)

![Wiring Diagram Single-Phase Motor](image)

For RH 0010-0021 B:
- Electrically connect the motor directly to the mains connection (MC).

Connector type: EN 60320-C13 (AC plug for Europe included)
### NOTE

The factory default voltage class is set for 200-240 V use.
If the motor is to be operated with a voltage such as 100-120 V:
- Open the motor terminal box (MTB).
- Change the switch position (see the following illustration).

<table>
<thead>
<tr>
<th>Voltage class switch for:</th>
<th>Voltage class switch for:</th>
</tr>
</thead>
<tbody>
<tr>
<td>RH 0003 B and RH 0021 B</td>
<td>RH 0010 B and RH 0015 B</td>
</tr>
<tr>
<td>200-240 V</td>
<td>200-240 V</td>
</tr>
<tr>

<td>100-120 V</td>
</tr>
</tbody>
</table>

#### 5.4.2 Wiring Diagram Three-Phase Motor
- Electrically connect the motor according to the following wiring diagram:
  - Terminal block (Power supply ▶ M4 thread; Earth ▶ M5 thread)

**Delta connection (low voltage):**

```
  W2 ---------- U2 ---------- V2
  |           |           |
  |           |           |
  U1 ---------- V1 ---------- W1

L1          L2          L3
```

**Star connection (high voltage):**

```
  W2 ---- U2 ---- V2
  |     |     |
  |     |     |
  U1 ---- V1 ---- W1

L1          L2          L3
```

### NOTICE

Incorrect direction of rotation.

**Risk of damage to the motor!**
- Operation in the wrong direction of rotation can destroy the machine in a short time!
  Prior to starting-up make sure that the machine is operated in the right direction.

- Determine the intended direction of rotation with the arrow (stuck on or cast).
- ‘Bump’ the motor.

If the rotation must be changed:
- Switch any two of the motor phase wires.
6 Commissioning

**NOTICE**

The machine is shipped without oil.

*Operation without oil will ruin the machine in short time!*

- Prior to commissioning, the machine must be filled with oil, see Filling Oil [10].

---

**CAUTION**

During operation the surface of the machine may reach temperatures of more than 70°C.

*Risk of burns!*

- Avoid contact with the machine during and directly after operation.
- Make sure that the installation conditions (see Installation Conditions [7]) are complied with.
- Make sure that the gas ballast valve is closed before starting the machine.
- Switch on the machine.
- Make sure that the maximum permissible number of starts does not exceed 12 starts per hour.
- After few minutes of operation, check the oil level and top up if necessary.

As soon as the machine is operated under normal operating conditions:

- Measure the motor current and record it as reference for future maintenance and troubleshooting work.

---

### 6.1 Continuous Operation

**NOTICE**

Working at a suction pressure higher than 100 hPa in continuous operation.

*Oil will gush out from the exhaust and the machine will run out of oil very quickly!*

*Operation without oil will ruin the machine in short time!*

- Limit the suction pressure in continuous operation.

If the machine is equipped with an oil mist separator:

- The operating time in continuous operation is not limited below a suction pressure of 0.4 hPa.

In case of a higher suction pressure:

- The machine must be stopped for at least 5 minutes or operate at a pressure lower than 0.4 hPa for at least 10 minutes within the maximum operating time (see table below).

This operation allows the oil collected in the separator to return to the machine.

The following table gives reference values which may vary depending on the pumping speed and the operating conditions.
### 6.2 Conveying Condensable Vapours

Water vapour within the gas flow is tolerated within certain limits. The conveyance of other vapours shall be agreed upon with Busch.

If condensable vapours are to be conveyed:

- Make sure that the gas ballast valve is open.

**Before process:**
- Warm up the machine for approximately half an hour.

**After process:**
- Operate the machine for approximately another half an hour.

### 7 Maintenance

#### WARNING

Machines contaminated with hazardous material.

*Risk of poisoning!*

*Risk of infection!*

If the machine is contaminated with hazardous material:

- Wear appropriate personal protective equipment.

#### CAUTION

Hot surface.

*Risk of burns!*

- Prior to any action requiring touching the machine, let the machine cool down first.

- Shut down the machine and lock against inadvertent start up.
- Vent the connected lines to atmospheric pressure.
- Disconnect all connections.

### 7.1 Maintenance Schedule

The maintenance intervals depend very much on the individual operating conditions. The intervals given below are desired to be considered as starting values which should be shortened or extended as appropriate. Particularly heavy duty operation, such as high dust loads in the environment or in the process gas, other contamination or ingress of process material, can make it necessary to shorten the maintenance intervals significantly.

<table>

</tr>
</tbody>
</table>

Interval | Maintenance work
--- | ---
Weekly | • Check the level and the colour of the oil.
       | • Check the machine for oil leaks - in case of leaks have the machine repaired (contact Busch).
Monthly | • Check the inlet screen, clean if necessary.
         | In case of an inlet filter being installed:
         |       • Check the inlet filter cartridge, replace if necessary.
After the first 240 hours | • Change the oil, see Oil Change [16].
At least after 2000 hours | In case of an oil separator being installed:
       |       • Change the filter cartridge
Between 6 and 12 months | • Change the oil, see Oil Change [16].
       | The oil change depends on the process application, refer to the table of Oil Change Recommendations [15].
Yearly | • Clean the machine from dust and dirt.
      | • Check the coupling, see Coupling Maintenance [18].
Every 5 years | • Have a major overhaul on the machine (contact Busch).
7.3 Oil Change

Oil draining for RH 0003-0015 B:

Check the o-ring if it is correctly seated in the groove

Oil draining for RH 0021 B:

Drain pan
For oil type and oil capacity see Technical Data [p. 23] and Oil [p. 23].

Oil filling for RH 0003-0015 B:

Oil filling for RH 0021 B:
7.4 Coupling Maintenance

- Disassemble the machine according to the following illustration.

- Check the coupling spider.
- Change it if necessary.
- Reassemble the machine.

8 Overhaul

⚠️ NOTICE

Improper assembly.

Risk of premature failure!
Loss of efficiency!

- It is highly recommended that any dismantling of the machine that goes beyond anything that is described in this manual should be done through Busch.

⚠️ WARNING

Machines contaminated with hazardous material.

Risk of poisoning!
Risk of infection!

If the machine is contaminated with hazardous material:
- Wear appropriate personal protective equipment.

In case of the machine having conveyed gas that was contaminated with foreign materials which are dangerous to health:
- Decontaminate the machine as good as possible and state the contamination status in a ‘Declaration of Contamination’.

Busch will only accept machines that come with a complete filled in and legally binding signed ‘Declaration of Contamination’.
(Form downloadable from www.buschvacuum.com)
9 Decommissioning

- Shut down the machine and lock against inadvertent start up.
- Vent the connected lines to atmospheric pressure.
- Disconnect all connections.

In case of storage is planned:
- See Storage [p 7].

9.1 Dismantling and Disposal

- Drain the oil.
- Separate special waste from the machine.
- Dispose of special waste in compliance with applicable regulations.
- Dispose of the machine as scrap metal.
10 Spare Parts

![NOTICE]

Use of non-Busch genuine spare parts.

Risk of premature failure!

Loss of efficiency!

- The exclusive use of Busch genuine spare parts and consumables is recommended for the proper function of the machine and for granting of warranty.

12 Troubleshooting

⚠️ DANGER

Live wires.
**Risk of electrical shock.**
* Electrical installation work must only be executed by qualified personnel.

⚠️ CAUTION

Hot surface.
**Risk of burns!**
* Prior to any action requiring touching the machine, let the machine cool down first.

15 EU Declaration of Conformity

This Declaration of Conformity and the CE-mark affixed to the nameplate are valid for the machine within the Busch scope of delivery. This Declaration of Conformity is issued under the sole responsibility of the manufacturer. When this machine is integrated into a superordinate machinery the manufacturer of the superordinate machinery (this can be the operating company, too) must conduct the conformity assessment process for the superordinate machine or plant, issue the Declaration of Conformity for it and affix the CE-mark.

The manufacturer

Busch Produktions GmbH
Schauinslandstr. 1
DE-79689 Maulburg

declare that the machine(s): Zebra RH 0003 B; RH 0010 B; RH 0015 B; RH 0021 B
with a serial number 1679… to 1779…
has (have) been manufactured in accordance with the European Directives:
- ‘Machinery’ 2006/42/EC
- ‘RoHS’ 2011/65/EU, restriction of the use of certain hazardous substances in electrical and electronic equipment
and following the standards.
