Busch – All over the World in Industry ........... 16

Preface

Congratulations on your purchase of the Busch vacuum and pressure pump. With watchful observation of the field's requirements, innovation and steady development Busch delivers modern vacuum and pressure solutions worldwide.

These operating instructions contain information for

- product description,
- safety,
- transport,
- storage,
- installation and commissioning,
- maintenance,
- overhaul,
- troubleshooting and
- spare parts

of the vacuum and pressure pump.

For the purpose of these instructions, “handling” the vacuum and pressure pump means the transport, storage, installation, commissioning, influence on operating conditions, maintenance, troubleshooting and overhaul of the vacuum and pressure pump.

Prior to handling the vacuum and pressure pump these operating instructions shall be read and understood. If anything remains to be clarified please contact your Busch representative!

Keep these operating instructions and, if applicable, other pertinent operating instructions available on site.
Product Description

Use

The vacuum and pressure pump is intended for
- the suction (SV 1005 C / SV 1008 C)
- the compression (SD 1005 C / SD 1008 C)
- air and other dry, non-aggressive, non-toxic and non-explosive gases

Conveying media with a lower or higher density than air leads to an increased thermal and/or mechanical load on the vacuum and pressure pump and is permissible only after prior consultation with Busch.

The gas shall be free from vapours that would condensate under the temperature and pressure conditions inside the vacuum and pressure pump.

The vacuum and pressure pump is intended for the placement in a non-potentially explosive environment.

The vacuum and pressure pump is thermally suitable for continuous operation (100 percent duty).

Version with AC-motor: the drive is equipped with a thermal protection switch.

In case of vacuum operation (SV 1005 C / SV 1008 C):
- The vacuum and pressure pump is ultimate pressure proof.

In case of pressure operation (SD 1005 C / SD 1008 C):
- The maximum allowed pressure on the pressure connection (b) is 2 bar abs (the nameplate of the vacuum and pressure pump indicates the valid pressure). By means of process control and/or pressure relief valves it must be made sure that the maximum allowed pressure will not be exceeded.

Principle of Operation

The vacuum and pressure pump works on the rotating vane principle.

A circular rotor is positioned centrically on the shaft of the vacuum and pressure pump (i.e. drive motor shaft).

The rotor rotates in an also circular, fixed cylinder, the centreline of which is offset from the centreline of the rotor such that the rotor and the inner wall of the cylinder almost touch along a line. Vanes (35), sliding in slots in the rotor, separate the space between the rotor and the cylinder into chambers. At any time gas is sucked in and at almost any time ejected. Therefore the vacuum and pressure pump works almost pulsation free.

The vacuum and pressure pump compresses the inlet gas absolutely oil-free. A lubrication of the pump chamber is neither necessary nor allowed.

Cooling

The vacuum and pressure pump is cooled by
- radiation of heat from the surface of the vacuum and pressure pump
- the air flow from the fan wheel of the drive motor
- the process gas

Start Controls

The vacuum and pressure pump comes without start controls. The control of the vacuum and pressure pump is to be provided in the course of installation.

Safety

Intended Use

Definition: For the purpose of these instructions, “handling” the vacuum and pressure pump means the transport, storage, installation, commissioning, influence on operating conditions, maintenance, troubleshooting and overhaul of the vacuum and pressure pump.

The vacuum and pressure pump is intended for industrial use. It shall be handled only by qualified personnel.

The allowed media and operational limits (page 3: Product Description) and the installation prerequisites (page 4: Installation Prerequisites) of the vacuum and pressure pump shall be observed both by the manufacturer of the machinery into which the vacuum and pressure pump is to be incorporated and by the operator.

The maintenance instructions shall be observed.

Prior to handling the vacuum and pressure pump these installation and operating instructions shall be read and understood. If anything remains to be clarified please contact your Busch representative!

Safety Notes

The vacuum and pressure pump has been designed and manufactured according to state-of-the-art methods. Nevertheless, residual risks may remain. These operating instructions highlight potential hazards where appropriate. Safety notes are tagged with one of the keywords DANGER, WARNING and CAUTION as follows:

- **DANGER**
  - Disregard of this safety note will always lead to accidents with fatal or serious injuries.

- **WARNING**
  - Disregard of this safety note may lead to accidents with fatal or serious injuries.
Noise Emission
For the sound pressure level in free field according to EN ISO 2151
→ page 15: Technical Data.

Transport
Transport in Packaging
Vacuum and pressure pumps individually packed in cardboard boxes can be carried by hand.
Packed on a pallet the vacuum and pressure pump is to be transported with a forklift.

Transport without Packaging
In case the vacuum and pressure pump is packed in a cardboard box with inflated cushions:
◆ Remove the inflated cushions from the box
In case the vacuum and pressure pump is in a cardboard box cushioned with rolled corrugated cardboard:
◆ Remove the corrugated cardboard from the box
In case the vacuum and pressure pump is laid in foam:
◆ Remove the foam
Version without handle:
◆ Grasp the vacuum and pressure pump with both hands
Version with handle:
◆ Carry the vacuum and pressure pump using the handle

Storage
Short-term Storage
◆ Make sure that the suction connection/gas inlet and the gas discharge/pressure connection are closed (leave the provided plugs in)
◆ Store the vacuum and pressure pump
  – if possible in original packaging,
  – indoors,
  – dry,
  – dust free and
  – vibration free

Conservation
In case of adverse ambient conditions (e.g. aggressive atmosphere, frequent temperature changes) conserve the vacuum and pressure pump immediately. In case of favourable ambient conditions conserve the vacuum and pressure pump if a storage of more than 3 months is scheduled.
◆ Make sure that all ports are firmly closed; seal all ports that are not sealed with PTFE-tape, gaskets or o-rings with adhesive tape

Note: VCI stands for “volatile corrosion inhibitor”. VCI-products (film, paper, cardboard, foam) evaporate a substance that condenses in molecular thickness on the packed good and by its electro-chemical properties effectively suppresses corrosion on metallic surfaces. However, VCI-products may attack the surfaces of plastics and elastomers. Seek advice from your local packaging dealer! Busch uses CORTEC VCI 126 R film for the overseas packaging of large equipment.

FOR COMMISSIONING AFTER CONSERVATION:
◆ Make sure that all remains of adhesive tape are removed from the ports
◆ Commission the vacuum and pressure pump as described in the chapter Installation and Commissioning (→ page 4)

Installation and Commissioning
Installation Prerequisites

CAUTION
In case of non-compliance with the installation prerequisites, particularly in case of insufficient cooling:
Risk of damage or destruction of the vacuum and pressure pump and adjoining plant components!
Risk of injury!
The installation prerequisites must be complied with.

◆ Make sure that the integration of the vacuum and pressure pump is carried out such that the essential safety requirements of the Machine Directive 2006/42/EC are complied with (in the responsibility of the designer of the machinery into which the vacuum and pressure pump is to be incorporated, → page 14: note in the EC-Declaration of Conformity)

Mounting Position and Space
◆ Make sure that the environment of the vacuum and pressure pump is not potentially explosive
◆ Make sure that the following ambient conditions will be complied with:
  – ambient temperature: −10 ... +40 °C
  – ambient pressure: atmospheric
◆ Make sure that the environmental conditions comply with the protection class of the drive motor (according to the nameplate)
◆ Make sure that the vacuum and pressure pump will be placed or mounted horizontally
◆ Make sure that the base for placement / mounting base is even
◆ Make sure that in order to warrant a sufficient cooling there will be a clearance of minimum 2 cm between the vacuum and pressure pump and nearby walls
◆ Make sure that no heat sensitive parts (plastics, wood, cardboard, paper, electronics) will touch the surface of the vacuum and pressure pump
◆ Make sure that the installation space or location is vented such that a sufficient cooling of the vacuum and pressure pump is warranted

SV 1005 C / SD 1005 C / SV 1008 C / SD 1008 C
In case of vacuum operation:

- Make sure that the inlet gas can contain dust or other foreign solid particles:
  - Make sure that a suitable filter (5 micron or less) is installed upstream the vacuum and pressure pump.

- Make sure that the suction line fits to the suction connection/gas inlet (a) of the vacuum and pressure pump.
- Make sure that the gas will be sucked through a vacuum-tight flexible hose or a pipe.

In case of using a pipe:

- Make sure that the pipe will cause no stress on the vacuum and pressure pump's connection, if necessary use an expansion joint.
- Make sure that the suction line does not contain foreign objects, e.g. welding scales.

**Gas Discharge**

In case of vacuum operation:

The discharged gas must flow without obstruction. It is not permitted to shut off or throttle the discharge line or to use it at as a pressurised air source.

In case of vacuum operation:

The following guidelines for the discharge line do not apply, if the aspirated air is discharged to the environment right at the vacuum and pressure pump.

- Make sure that the discharge line fits to the gas discharge (b) of the vacuum and pressure pump.

In case of using a pipe:

- Make sure that the line size of the discharge line over the entire length is at least as large as the gas discharge (b) of the vacuum and pressure pump.

**Pressure Connection (SD 1005 C / SD 1008 C)**

- Make sure that the suction line fits to the suction connection (b) of the vacuum and pressure pump.
- Make sure that the suction line is designed for 1.5 barg and 140 °C

In case of using a pipe:

- Make sure that the gas will be sucked through a vacuum-tight flexible hose or a pipe.

**Electrical Connection / Controls**

- Make sure that the power supply matches the data on the name-plate of the vacuum and pressure pump.
- Make sure that an overload protection according to EN 60204-1 is provided for the drive motor.
- Make sure that the drive of the vacuum and pressure pump will not be affected by electric or electromagnetic disturbance from the mains; if necessary seek advice from the Busch service.

In case of mobile installation:

- Provide the electrical connection with grommets that serve as strain-relief.

**Installation**

**Mounting**

- Make sure that the Installation Prerequisites (page 4) are complied with.
- Set down or mount the vacuum and pressure pump at its location.
Connecting Electrically

WARNING
Risk of electrical shock, risk of damage to equipment.

Electrical installation work must only be executed by qualified personnel that knows and observes the following regulations:
- IEC 364 or CENELEC HD 384 or DIN VDE 0100, respectively,
- IEC-Report 664 or DIN VDE 0110,
- BGV A2 (VBG 4) or corresponding national accident prevention regulation.

- Observe the instructions/diagram for the drive motor connection from the motor terminal box
- Electrically connect the drive motor
- Connect the protective earth conductor

CAUTION
Operation in the wrong direction of rotation can destroy the vacuum and pressure pump in short time.
Prior to starting-up it must be made sure that the vacuum and pressure pump is operated in the proper direction.

Version with three-phase motor:
- Determine the intended direction of rotation with the arrow (f, 42) (stuck on or cast)
- “Bump” the drive motor
- Watch the fan wheel of the drive motor and determine the direction of rotation just before the fan wheel stops

If the rotation must be changed:
- Switch any two of the drive motor wires (three-phase motor)

Connecting Lines/Pipes
- Connect the suction line

Installation without suction line:
- Make sure that the gas inlet (a) is open
- Connect the discharge line

or
- Connect the pressure line

Installation without discharge line:
- Make sure that the gas discharge (b) is open
- Make sure that all provided covers, guards, hoods etc. are mounted
- Make sure that cooling air inlets and outlets are not covered or obstructed and that the cooling air flow is not affected adversely in any other way

Recording of Operational Parameters
As soon as the vacuum and pressure pump is operated under normal operating conditions:
- Measure the drive motor current and record it as reference for future maintenance and troubleshooting work

Operation Notes

Use

CAUTION
The vacuum and pressure pump is designed for operation under the conditions described below.

- In case of disregard risk of damage or destruction of the vacuum and pressure pump and adjoining plant components!
- Risk of injury!

The vacuum and pressure pump must only be operated under the conditions described below.

The vacuum and pressure pump is intended for
- the suction (SV 1005 C / SV 1008 C)
- the compression (SD 1005 C / SD 1008 C) of
- air and other dry, non-aggressive, non-toxic and non-explosive gases

Conveying media with a lower or higher density than air leads to an increased thermal and/or mechanical load on the vacuum and pressure pump and is permissible only after prior consultation with Busch.

The gas shall be free from vapours that would condensate under the temperature and pressure conditions inside the vacuum and pressure pump.

The vacuum and pressure pump is intended for the placement in a non-potentially explosive environment.

The vacuum and pressure pump is thermally suitable for continuous operation (100 percent duty).

Version with AC-motor: the drive is equipped with a thermal protection switch.

In case of vacuum operation (SV 1005 C / SV 1008 C):
- The vacuum and pressure pump is ultimate pressure proof.

In case of pressure operation (SD 1005 C / SD 1008 C):
- The maximum allowed pressure on the pressure connection (b) is 2 bar abs (the nameplate of the vacuum and pressure pump indicates the valid pressure). By means of process control and/or pressure relief valves it must be made sure that the maximum allowed pressure will not be exceeded.

CAUTION
During operation the surface of the vacuum and pressure pump may reach temperatures of more than 70 °C.

Risk of burns!

The vacuum and pressure pump shall be protected against contact during operation, it shall cool down prior to a required contact or heat protection gloves shall be worn.

- Make sure that all provided covers, guards, hoods etc. remain mounted
- Make sure that protective devices will not be disabled
- Make sure that cooling air inlets and outlets will not be covered or obstructed and that the cooling air flow will not be affected adversely in any other way
- Make sure that the installation prerequisites (page 4: Installation Prerequisites) are complied with and will remain complied with, particularly that a sufficient cooling will be ensured
Maintenance

DANGER

In case the vacuum and pressure pump conveyed gas that was contaminated with foreign materials which are dangerous to health, harmful material can reside in filters.

Danger to health during inspection, cleaning or replacement of filters.

Danger to the environment.

Personal protective equipment must be worn during the handling of contaminated filters.

Contaminated filters are special waste and must be disposed of separately in compliance with applicable regulations.

CAUTION

During operation the surface of the vacuum and pressure pump may reach temperatures of more than 70 °C.

Risk of burns!

Prior to disconnecting connections make sure that the connected pipes/lines are vented to atmospheric pressure

Maintenance Schedule

Note: The maintenance intervals depend very much on the individual operating conditions. The intervals given below shall be considered as starting values which should be shortened or extended as appropriate. Particularly heavy duty operation, such like high dust loads in the environment or in the process gas, other contaminations or ingress of process material, can make it necessary to shorten the maintenance intervals significantly.

Monthly:

Make sure that the vacuum and pressure pump is shut down and locked against inadvertent start up

In case an inlet air filter (62, 63) is installed:

Check the inlet air filter (62, 63), if necessary replace

In case of operation in a dusty environment:

Clean as described under page 7: Every 6 Months:

Every 6 Months:

Make sure that the housing is free from dust and dirt, clean if necessary

Make sure that the vacuum and pressure pump is shut down and locked against inadvertent start up

Clean the fan cowling, the fan wheel, the ventilation grille and the cooling fins

Every Year:

Make sure that the vacuum and pressure pump is shut down and locked against inadvertent start up

In case an inlet air filter (62, 63) is installed:

Replace the inlet air filter (62, 63)

In case an inlet screen is installed:

Check the inlet screen, clean if necessary

Every 1500 – 2000 (SD) / 2000 – 3000 (SV) Operating Hours:

Replace the vanes (35) (page 7: Check/Replacement of Vanes)

Check/Replacement of Vanes

Make sure that the vacuum and pressure pump is shut down and locked against inadvertent start up

Remove the cylinder cover

Remove the vanes (35)

Check the vanes (35) for damage

Measure the height A of the vanes (35)

CAUTION

The vanes (35) are made of special carbon and are self-lubricating.

The vanes must by no means be lubricated with oil or grease.

In case the vanes (35) are undamaged, the height A of all vanes is more than 23 mm and regular inspections in short intervals are ensured:

Reinsert the vanes (35) as shown

In case a vane (35) is damaged, its height A is less than 23 mm, 1500 – 2000 (SD) / 2000 – 3000 (SV) operating hours have passed since the last change or will have passed until the next inspection:

Insert new vanes (35) as shown

Reattach the cylinder cover

Overhaul

CAUTION

In order to achieve best efficiency and a long life the vacuum and pressure pump was assembled and adjusted with precisely defined tolerances.

This adjustment will be lost during dismantling of the vacuum and pressure pump.

It is therefore strictly recommended that any dismantling of the vacuum and pressure pump that is beyond of what is described in this manual shall be done by Busch service.

SV 1005 C / SD 1005 C / SV 1008 C / SD 1008 C
DANGER

In case the vacuum and pressure pump conveyed gas that was contaminated with foreign materials which are dangerous to health, harmful material can reside in pores, gaps and internal spaces of the vacuum and pressure pump.

Danger to health during dismantling of the vacuum and pressure pump.

Danger to the environment.

Prior to shipping the vacuum and pressure pump shall be decontaminated as good as possible and the contamination status shall be stated in a “Declaration of Contamination” (form downloadable from www.busch-vacuum.com).

Busch service will only accept vacuum and pressure pumps that come with a completely filled in and legally binding signed “Declaration of Contamination” (form downloadable from www.busch-vacuum.com).

Removal from Service

Temporary Removal from Service

- Prior to disconnecting pipes/lines make sure that all pipes/lines are vented to atmospheric pressure

Recommissioning

- Observe the chapter Installation and Commissioning ( page 4)

Dismantling and Disposal

DANGER

In case the vacuum and pressure pump conveyed gas that was contaminated with foreign materials which are dangerous to health, harmful material can reside in pores, gaps and internal spaces of the vacuum and pressure pump.

Danger to health during dismantling of the vacuum and pressure pump.

Danger to the environment.

During dismantling of the vacuum and pressure pump personal protective equipment must be worn.

The vacuum and pressure pump must be decontaminated prior to disposal.

- Make sure that materials and components to be treated as special waste have been separated from the vacuum and pressure pump
- Make sure that the vacuum and pressure pump is not contaminated with harmful foreign material

According to the best knowledge at the time of printing of this manual the materials used for the manufacture of the vacuum and pressure pump involve no risk.

- Dispose of the vacuum and pressure pump as scrap metal
# Troubleshooting

**WARNING**

Risk of electrical shock, risk of damage to equipment.

Electrical installation work must only be executed by qualified personnel that knows and observes the following regulations:
- IEC 364 or CENELEC HD 384 or DIN VDE 0100, respectively,
- IEC-Report 664 or DIN VDE 0110,
- BGV A2 (VBG 4) or equivalent national accident prevention regulation.

**CAUTION**

During operation the surface of the vacuum and pressure pump may reach temperatures of more than 70 °C.

Risk of burns!

Let the vacuum and pressure pump cool down prior to a required contact or wear heat protection gloves.

|                                                                      | Mains frequency or voltage outside tolerance range                    | Provide a more stable power supply                                        |
|                                                                      | Partial clogging of filters or screens                                | Remove the clogging                                                      |
|                                                                      | Partial clogging in the suction, discharge or pressure line          |                                                                         |
|                                                                      | Long suction, discharge or pressure line with too small diameter      | Use larger diameter                                                      |
Spare Parts/Accessories

Note: When ordering spare parts or accessories acc. to the table below please always quote the type ("Type") and the serial no. ("No") of the vacuum and pressure pump. This will allow Busch service to check if the vacuum and pressure pump is compatible with a modified or improved part.

The exclusive use of genuine spare parts and consumables is a prerequisite for the proper function of the vacuum and pressure pump and for the granting of warranty, guarantee or goodwill.

Your point of contact for service and spare parts in the United Kingdom:

Busch (UK) Ltd.
Hortonwood 30-35
Telford
Shropshire
TF1 7YB
Tel: 01952 677 432
Fax: 01952 677 423

Your point of contact for service and spare parts in Ireland:

Busch Ireland Ltd.
A10-11 Howth Junction Business Centre
Kilbarrack, Dublin 5
Tel: +353 (0)1 8321466
Fax: +353 (0)1 8321470

Your point of contact for service and spare parts in the USA:

Busch Inc.
516-B Viking Drive
Virginia Beach, VA 23452
Tel: 1-800-USA-PUMP (872-7867)

Your point of contact for service and spare parts in Canada:

Busch Vacuum Technics Inc.
1740, Boulevard Lionel Bertrand
Boisbriand (Montréal)
Québec J7H 1N7
Tel: 450 435 6899
Fax: 450 430 5132

Your point of contact for service and spare parts in Australia:

Busch Australia Pty. Ltd.
30 Lakeside Drive
Broadmeadows, Vic. 3047
Tel: (03) 93 55 06 00
Fax: (03) 93 55 06 99

Your point of contact for service and spare parts in New Zealand:

Busch New Zealand Ltd.
Unit D, Arrenway Drive
Albany, Auckland 1311
P O Box 302696
North Harbour, Auckland 1330
Tel: 0-9-414 7782
Fax: 0-9-414 7783

Find the list of Busch companies all over the world (by the time of the publication of these installation and operating instructions) on page 16 (rear cover page).

Find the up-to-date list of Busch companies and agencies all over the world on the internet at www.busch-vacuum.com.

EC-Declaration of Conformity

Note: This Declaration of Conformity and the CE-mark affixed to the nameplate are valid for the machine within the Busch scope of delivery. This Declaration of Conformity is issued under the sole responsibility of the manufacturer.

When this machine is integrated into a superordinate machinery the manufacturer of the superordinate machinery (this can be the operating company, too) must conduct the conformity assessment process for the superordinate machine or plant, issue the Declaration of Conformity for it and affix the CE-mark.

We

Busch Vyroba CZ s.r.o.
Svárovská 620,

Czech Republic

Declare that the vacuum pumps SV 1005 C / SD 1005 C / SV 1008 C / SD 1008 C

with a serial number from D1701... to D1952...

has (have) been manufactured in accordance with the European Directives:

- ‘Machinery’ 2006/42/EC
- ‘Electromagnetic Compatibility’ 2014/30/EU
- ‘RoHS’ 2011/65/EU, restriction of the use of certain hazardous substances in electrical and electronic equipment

and following the standards.
