1 Safety

Prior to handling the machine, this instruction manual should be read and understood. If anything needs to be clarified, please contact your Busch representative.

Read this manual carefully before use and keep for future reference.

This instruction manual remains valid as long as the customer does not change anything on the product.

The machine is intended for industrial use. It must be handled only by technically trained personnel.

Always wear appropriate personal protective equipment in accordance with the local regulations.

The machine has been designed and manufactured according to state-of-the-art methods. Nevertheless, residual risks may remain. This instruction manual highlights potential hazards where appropriate. Safety notes and warning messages are tagged with one of the keywords DANGER, WARNING, CAUTION, NOTICE and NOTE as follows:

⚠️ DANGER

... indicates an imminent dangerous situation that will result in death or serious injuries if not prevented.

⚠️ WARNING

... indicates a potentially dangerous situation that could result in death or serious injuries.

⚠️ CAUTION

... indicates a potentially dangerous situation that could result in minor injuries.

⚠️ NOTICE

... indicates a potentially dangerous situation that could result in damage to property.

ℹ️ NOTE

... indicates helpful tips and recommendations, as well as information for efficient and trouble-free operation.
## 2 Product Description

### NOTE

Technical term.

In this instruction manual, we consider that the term ‘machine’ refers to the ‘vacuum pump’.

2.1 Operating Principle

The machine works on the rotary vane principle.
The oil seals the gaps, lubricates the vanes and takes away compression heat.
The oil filter cleans the circulating oil.
Exhaust filters separate the oil from the discharged gas.

2.2 Application

The machine is intended for the suction of air and other dry, non-aggressive, non-toxic and non-explosive gases.
The oxygen version is especially designed for conveying gases with an increased oxygen content (volume content greater than 21% and up to 100%).
Conveying of other media leads to an increased thermal and/or mechanical load on the machine and is permissible only after a consultation with Busch.
The machine is intended for the placement in a non-potentially explosive environment.
The machine is designed for indoor installation, in case of outdoor installation, ask your Busch representative in order to take specific precautions.
The machine is capable of maintaining ultimate pressure, see Technical Data [► 31].
The machine is suitable for continuous operation.
Permitted environmental conditions, see Technical Data [► 31].

2.3 Start Controls

The machine comes without start controls. The control of the machine is to be provided in the course of installation.
The machine can be optionally equipped with a starter unit or a variable-frequency drive.

2.4 Optional Accessories

2.4.1 Gas Ballast Valve

The gas ballast valve mixes the process gas with a limited quantity of ambient air to counteract the condensation of vapour inside the machine.
The gas ballast valve has an influence on the ultimate pressure of the machine, see Technical Data [► 31].
2.4.2 Inlet Filter
The inlet filter protects the machine against dust and other solids in the process gas. The inlet filter is available with a cartridge. The clamped design makes it easy to adjust the position to the installation and the o-ring sealing guaranties the tightness.

2.4.3 Additional Oil Separator
It allows to trap and recover at the machine exhaust the smallest oil particles. The recovered oil is automatically re-injected in the machine. It is recommended to use it when the machine working pressure is higher than 100 hPa (mbar).

2.4.4 Water-oil Heat Exchanger
In case of unfavourable ambient conditions a water-oil heat exchanger can be provided. See Cooling Water Connection (Optional) [► 12].

2.4.5 Temperature Switch
The temperature switch monitors the oil temperature of the machine. Depending on the oil type, the machine must be stopped when the oil reaches a certain temperature, see Oil [► 32].

2.4.6 Resistance Thermometer
The resistance thermometer monitors the oil temperature of the machine. Depending on the oil type, warning and trip signals must be set, see Oil [► 32].

2.4.7 Level and Temperature Switch
The level switch with integrated temperature switch monitors the oil level and the oil temperature. It has one level switch point and two temperature switch points. The machine must be stopped when the oil level is too low or, depending on the oil type, when the oil reaches a certain temperature, see Oil [► 32].

2.4.8 Pressure Switch
The pressure switch monitors the pressure in the oil separator. The machine must be stopped when the gas reaches a certain pressure, see Wiring Diagram Pressure Switch (Optional) [► 18].

2.4.9 Pressure Transmitter
The pressure transmitter monitors the pressure in the oil separator. Warning and trip signals must be set, see Wiring Diagram Pressure Transmitter (Optional) [► 18].
3 Transport

**WARNING**

Suspended load.

*Risk of severe injury!*

- Do not walk, stand or work under suspended loads.

---

**NOTICE**

In case the machine is already filled with oil.

*Tilting a machine that is already filled with oil can cause large quantities of oil to ingress into the cylinder. Starting the machine with excessive quantities of oil in the cylinder will immediately break the vanes and ruin the machine!*

- Drain the oil prior to every transport or always horizontally transport the machine.

- Make sure that the eyebolt (EB) is in faultless condition, fully screwed in and tightened by hand.

---

**WARNING**

Lifting the machine using the motor eye bolt.

*Risk of severe injury!*

- Do not lift the machine using the eye bolt fitted to the motor. Only lift the machine as previously shown.

- Check the machine for transport damage.

If the machine is secured to a base plate:

- Remove the machine from the base plate.
4 Storage

- Seal all apertures with adhesive tape or reuse provided caps.

Version with water-oil heat exchanger:

- Make sure that the cooling water has been completely removed, see Decommissioning [► 27].

If the machine is to be stored for more than 3 months:

- Wrap the machine in a corrosion inhibiting film.
- Store the machine indoors, dry, dust free and if possible in original packaging preferably at temperatures between 5 °C ... 55 °C.

5 Installation

⚠️ WARNING

Lack of oxygen regulation knowledge.

Risk of fire!

- Installation, commissioning and maintenance must only be carried out by qualified personnel who are informed about the applicable safety regulations and trained in the handling of oxygen.
- Accident prevention regulations or methods must imperatively be complied with.

Seek further information:
- European Industrial Gases Association “EIGA” www.eiga.eu (EIGA SAG NL 79/04).
- Berufsgenossenschaft Rohstoffe und chemische Industrie “BG RCI” www.bgrci.de (Merkblatt M 034 Sauerstoff).

5.1 Installation Conditions

⚠️ WARNING

The machine is not absolutely gas tight.

Risk of fire!

- The installation area must be aired in such a way so as to prevent unacceptable levels of oxygen.

⚠️ NOTICE

Use of the machine outside of the permitted installation conditions.

Risk of premature failure!
Loss of efficiency!

- Take care that the installation conditions are fully complied with.
5.2 Connecting Lines / Pipes

- Make sure that the environment of the machine is not potentially explosive.
- Make sure that the ambient conditions comply with the Technical Data [► 31].
- Make sure that the environmental conditions comply with the protection class of the motor and the electrical instruments.
- Make sure that the installation space or location is vented such that sufficient cooling of the machine is provided.
- Make sure that cooling air inlets and outlets are not covered or obstructed and that the cooling air flow is not affected adversely in any other way.
- Make sure that the oil sight glass (OSG) remains easily visible.
- Make sure that enough space remains for maintenance work.
- Make sure that the machine is placed or mounted horizontally, a maximum of 1° in any direction is acceptable.
- Check the oil level, see Oil Level Inspection [► 22].
- Make sure that all provided covers, guards, hoods, etc. are mounted.

Version with water-oil heat exchanger:

- Make sure that the cooling water complies with the requirements, see Cooling Water Connection (Optional) [► 12].

If the machine is installed at an altitude greater than 1000 meters above sea level:

- Contact your Busch representative, the motor should be derated or the ambient temperature limited.

If the machine is equipped with monitoring devices or sensors:

- Make sure that the monitoring devices are correctly connected and integrated into a control system such that operation of the machine will be inhibited if the safety limit values are exceeded, see Electrical Connection of the Monitoring Devices [► 17].
5.2.1 Suction Connection

**WARNING**

Unprotected suction connection.

**Risk of severe injury!**

- Do not put hand or fingers in the suction connection.

**NOTICE**

Ingress of foreign objects or liquids.

**Risk of damage to the machine!**

If the inlet gas contains dust or other foreign solid particles:

- Install a suitable filter (5 micron or less) upstream from the machine.

Connection size:

- G2

Depending on the specific order, other connection dimensions may apply.

If the machine is used as part of a vacuum system:

- Busch recommends the installation of an isolation valve in order to prevent the oil from flowing back to the vacuum system.

5.2.2 Discharge Connection

**CAUTION**

The discharge gas contains small quantities of oil.

**Risk to health!**

If air is discharged into rooms where persons are present:

- Make sure that sufficient ventilation is provided.

Connection size:

- G2

Depending on the specific order, other connection dimensions may apply.

- Make sure that the discharged gas will flow without obstruction. Do not shut off or throttle the discharge line or use it as a pressurised air source.

Unless the aspirated air is discharged to the environment right at the machine:

- Make sure that the discharge line either slopes away from the machine or provide a liquid separator or a siphon with a drain cock, so that no liquids can flow back into the machine.
### 5.2.3 Cooling Water Connection (Optional)

The thermostatic valve (TV) is used to control the water flow in order to keep a stable machine temperature.

The pressure switch (PS) is used to monitor the presence of water at the cooling system of the machine.

When the pressure switch detects a pressure lower than 2 bar, the machine must be stopped.

The water bypass valve (WBV) is used at the first machine start-up. At that moment it should be open (approx. 90 seconds) to prime the water heat exchanger, afterwards it should be closed.

- Connect the cooling water connections (CWI / CWO) to the water supply.
- If necessary, electrically connect the pressure switch (PS), see Wiring Diagram Pressure Switch of Water-oil Heat Exchanger (Optional) [► 18].
- Make sure that the cooling water complies with the following requirements:

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Min. supply capacity l/min</td>
<td>2.5</td>
</tr>
<tr>
<td>Water pressure bar</td>
<td>2 ... 6</td>
</tr>
<tr>
<td>Supply temperature °C</td>
<td>+5 ... +35</td>
</tr>
<tr>
<td>Required pressure differential across supply and return bar</td>
<td>≥ 1</td>
</tr>
</tbody>
</table>

---

**Legend**

- CWI: Cooling water inlet
- CWO: Cooling water outlet
- WHE: Water-oil heat exchanger
- PS: Pressure switch
- WBV: Water bypass valve
- WF: Water filter
- TV: Thermostatic valve
To reduce the maintenance effort and ensure a long product lifetime we recommend the following cooling water quality:

<table>
<thead>
<tr>
<th>Property</th>
<th>Unit</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hardness</td>
<td>mg/l (ppm)</td>
<td>&lt; 90</td>
</tr>
<tr>
<td>Properties</td>
<td></td>
<td>Clean &amp; clear</td>
</tr>
<tr>
<td>PH value</td>
<td></td>
<td>7 ... 8</td>
</tr>
<tr>
<td>Particle size</td>
<td>µm</td>
<td>&lt; 200</td>
</tr>
<tr>
<td>Chloride</td>
<td>mg/l</td>
<td>&lt; 100</td>
</tr>
<tr>
<td>Electrical conductivity</td>
<td>µS/cm</td>
<td>≤ 100</td>
</tr>
<tr>
<td>Free chloride</td>
<td>mg/l</td>
<td>&lt; 0.3</td>
</tr>
<tr>
<td>Materials in contact with cooling water</td>
<td></td>
<td>Stainless steel, copper and cast iron</td>
</tr>
</tbody>
</table>

**NOTE**

Water hardness unit conversion.

1 mg/l (ppm) = 0.056 °dh (german degree) = 0.07 °e (english degree) = 0.1 °fH (french degree)

### 5.3 Filling Oil

**WARNING**

Fill the machine with wrong oil type.

**Risk of fire!**

- Only use oil approved by Busch and suitable for oxygen application, see Oil [32].

At delivery, the machine is already filled with specific oil "Busch YLC 250 B" which is suitable for oxygen application.

A lead seal is applied on the oil fill plug (OFP) and the oil drain plug (ODP) in order to prevent wrong material from being filled in.

Lead seal must only be removed and applied by authorised and trained personnel, seek advice from your Busch representative.

**NOTICE**

Remove lead seal without Busch approval.

**Loss of Busch liability!**

- Ask your Busch representative before filling or draining the oil.

**NOTICE**

Use of an inappropriate oil.

**Risk of premature failure!**

**Loss of efficiency!**

- Only use an oil type which has previously been approved and recommended by Busch.
5.4 Fitting the Coupling

In case of a machine delivery without motor:
- Fit the second coupling hub on the motor shaft (separately delivered).
- Axially adjust the sleeve in such a way until value “E” (or “L”) is reached.
- When the coupling adjustment is done, lock the coupling hub by tightening the radial screw.
- Mount the motor on the machine by including the coupling sleeve.

For further coupling information, go to www.ktr.com and download the instruction manual of the BoWex® coupling.
5.5 Electrical Connection

⚠️ DANGER
Live wires.

**Risk of electrical shock.**
- Electrical installation work must only be executed by qualified personnel.

ℹ️ NOTE
The operation with variable speed, i.e. with a variable-frequency drive or a soft starter unit, is allowed as long as the motor is admitted and the permitted motor speed range is neither underrun nor exceeded (see Technical Data [► 31]).

**Seek advice from your Busch representative.**

- Make sure that the power supply for the motor is compatible with the data on the nameplate of the motor.
- The electrical installation must comply with applicable national and international standards.
- Provide a lockable disconnect switch on the power line so that the machine is completely secured during maintenance tasks.
- Provide an overload protection according to EN 60204-1 for the motor.
  - Busch recommends installing a D-curve circuit breaker.
- Make sure that the motor of the machine will not be affected by electric or electromagnetic disturbance from the mains; if necessary seek advice from Busch.
- Connect the protective earth conductor.
- Electrically connect the motor.

⚠️ NOTICE
Incorrect connection.

**Risk of damage to the motor!**
- The wiring diagrams given below are typical. Check the inside of the terminal box for motor connection instructions/diagrams.
5.5.1 Wiring Diagram Three-Phase Motor

Delta connection (low voltage):

Star connection (high voltage):

Double star connection, multi-voltage motor with 9 pins (low voltage):

Star connection, multi-voltage motor with 9 pins (high voltage):

Double star connection, multi-voltage motor with 12 pins (low voltage):

Star connection, multi-voltage motor with 12 pins (high voltage):

Delta connection, multi-voltage motor with 12 pins (middle voltage):

**NOTICE**

Incorrect direction of rotation.

Risk of damage to the machine!

- Operation in the wrong direction of rotation can destroy the machine in a short time! Prior to start-up, ensure that the machine is operated in the right direction.

- Determine the intended direction of rotation with the arrow (stuck on or cast).
- Jog the motor briefly.
• Watch the fan wheel of the motor and determine the direction of rotation just before the fan wheel stops.
If the rotation of the motor must be changed:
  • Switch any two of the motor phase wires.

5.6 Electrical Connection of the Monitoring Devices

**NOTE**

In order to prevent potential nuisance alarms, Busch recommends that the control system is configured with a time delay of at least 20 seconds.

5.6.1 Wiring Diagram Temperature Switch (Optional)

Part no.: 0651 563 747
Connector: M12x1, 4-pin

Electrical data:
U = \(\leq 250\) V AC/DC (50/60 Hz) ; I = \(\leq 1\) A

Switch point:
- \(T_1\) pin 1 + 2 = 110 °C*
- \(T_2\) pin 3 + 4 = 130 °C*

* The switch point value depends on the oil type, see Oil [► 32].

5.6.2 Wiring Diagram Resistance Thermometer (Optional)

Part no.: 0651 563 753
Connector: M12x1, 4-pin

Electrical data:
U = 10 ... 35 VDC
4 ... 20 mA | 0 ... 150 °C

Warning / trip signals: see Oil [► 32].

5.6.3 Wiring Diagram Level and Temperature Switch (Optional)

Part no.: 0652 563 748
Connector: M12x1, 4-pin

Electrical data:
U = 230 V AC (50/60 Hz) ;
U = 100 V DC (50/60 Hz) ;
I = 0.5 A

Switch point:
- L pin 1 + 4 = low level
- \(T_1\) pin 1 + 2 = 110 °C*
- \(T_2\) pin 1 + 3 = 130 °C*

* The switch point value depends on the oil type, see Oil [► 32].

**NOTE:**
For this device, the recommended time delay to prevent nuisance alarms can be up to 240 seconds.
6 I Commissioning

**WARNING**

Lack of oxygen regulation knowledge.

Risk of fire!

- Installation, commissioning and maintenance must only be carried out by qualified personnel who are informed about the applicable safety regulations and trained in the handling of oxygen.
- Accident prevention regulations or methods must imperatively be complied with. Seek further information:
  - European Industrial Gases Association “EIGA” www.eiga.eu (EIGA SAG NL 79/04).
  - Berufsgenossenschaft Rohstoffe und chemische Industrie “BG RCI” www.bgrci.de (Merkblatt M 034 Sauerstoff).
**WARNING**
Machine contaminated with organic material.

**Risk of fire!**
If there is a suspicion that the machine or the oil is contaminated with organic material:
- The machine must be removed from service and cleaned by specialists (contact your Busch representative).

---

**CAUTION**
During operation the surface of the machine may reach temperatures of more than 70°C.

**Risk of burns!**
- Avoid contact with the machine during and directly after operation.

---

**CAUTION**
Noise of running machine.

**Risk of damage to hearing!**
If persons are present in the vicinity of a non noise insulated machine over extended periods:
- Make sure that ear protection is being used.
- Make sure that the installation conditions (see Installation Conditions [9]) are met.

Version with water-oil heat exchanger:
- Turn on the water supply.
- If the cooling water inlet is equipped with a water bypass valve (WBV), open it for approx. 90 seconds before the first machine start-up.
- Make sure that cooling water requirements are fully complied with, see Cooling Water Connection (Optional) [12].
- Switch on the machine.
- Make sure that the maximum permissible number of starts does not exceed 6 starts per hour. Those starts should be spread within the hour.
- Make sure that the operating conditions comply with the Technical Data [31].
- After a few minutes of operation, check the oil level and top up if necessary.

As soon as the machine is operated under normal operating conditions:
- Measure the motor current and record it as reference for future maintenance and troubleshooting work.
6.1 Conveying Condensable Vapours

Water vapour within the gas flow is tolerated within certain limits. The conveyance of other vapours shall be agreed upon with Busch.

If condensable vapours are to be conveyed:

* Close the isolation valve* and open the gas ballast valve** (GB)

Warm up the machine

• Close the isolation valve and perform the process

30 minutes

• Close the gas ballast valve

30 minutes

• Close the isolation valve

END

* not included in the scope of delivery
** may be considered as optional on certain products

7 Maintenance

⚠️ WARNING

Lack of oxygen regulation knowledge.

Risk of fire!

- Installation, commissioning and maintenance must only be carried out by qualified personnel who are informed about the applicable safety regulations and trained in the handling of oxygen.
- Accident prevention regulations or methods must imperatively be complied with. Seek further information:
  - European Industrial Gases Association “EIGA” www.eiga.eu (EIGA SAG NL 79/04).
  - Berufsgenossenschaft Rohstoffe und chemische Industrie “BG RCI” www.bgrci.de (Merkblatt M 034 Sauerstoff).

⚠️ WARNING

Machine contaminated with organic material.

Risk of fire!

If there is a suspicion that the machine or the oil is contaminated with organic material:

- The machine must be removed from service and cleaned by specialists (contact your Busch representative).

⚠️ WARNING

Use of non-Busch genuine spare parts.

Risk of fire!

- Only use Busch spare parts approved by Busch and suitable for oxygen application.
**WARNING**

Machines contaminated with hazardous material.

Risk of poisoning!
Risk of infection!

If the machine is contaminated with hazardous material:
- Wear appropriate personal protective equipment.

**CAUTION**

Hot surface.

Risk of burns!
- Prior to any action requiring touching the machine, let the machine cool down first.

**NOTICE**

Using inappropriate cleaners.

Risk of removing safety stickers and protective paint!
- Do not use incompatible solvents to clean the machine.

**CAUTION**

Failing to properly maintain the machine.

Risk of injuries!
Risk of premature failure and loss of efficiency!
- Respect the maintenance intervals or ask your Busch representative for service.
- Make sure to have an authorisation from Busch to perform any maintenance tasks.
- Shut down the machine and lock against inadvertent start up.
- Vent the connected lines to atmospheric pressure.

Version with water-oil heat exchanger:
- Turn off the water supply.

If necessary:
- Disconnect all connections.
7.1 Maintenance Schedule

The maintenance intervals depend very much on the individual operating conditions. The intervals given below are desired to be considered as starting values which should be shortened or extended as appropriate. Particularly harsh applications or heavy duty operation, such as high dust loads in the environment or in the process gas, other contamination or ingress of process material, can make it necessary to shorten the maintenance intervals significantly.

<table>
<thead>
<tr>
<th>Maintenance work</th>
<th>Normal application Interval</th>
<th>Harsh application Interval</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Check the oil level, see Oil Level Inspection [► 22].</td>

</tbody>
</table>

7.2 Oil Level Inspection

• Shut down the machine.

• When the machine is stopped, wait 1 minute before checking the oil level.

![MAX MIN](image)

• Fill up if necessary, see Oil Filling [► 13].
7.3 Oil Colour Inspection

⚠️ WARNING

Oil “YLC 250 B” contaminated chemically or by foreign bodies.

Risk of explosion!

If the oil becomes dark:

- Contact your Busch representative without delay.
- Make sure that the oil is either light or transparent.

If the oil becomes dark or looks different from the initial colour:

- Change the oil immediately, see Oil and Oil Filter Change [23].

You can consult your Busch representative in order to find out why this colour change has occurred.

7.4 Oil and Oil Filter Change

⚠️ WARNING

Fill the machine with wrong oil type.

Risk of fire!

- Only use oil approved by Busch and suitable for oxygen application, see Oil [32].

⚠️ NOTICE

Use of an inappropriate oil.

Risk of premature failure!

Loss of efficiency!

- Only use an oil type which has previously been approved and recommended by Busch.

A lead seal is applied on the oil fill plug (OFP) and the oil drain plug (ODP) in order to prevent wrong material from being filled in.

Lead seal must only be removed and applied by authorised and trained personnel, seek advice from your Busch representative.

⚠️ NOTICE

Remove lead seal without Busch approval.

Loss of Busch liability!

- Ask your Busch representative before filling or draining the oil.
Drain pan
1x o-ring, part no.: 0482 509 010

Oil filter wrench
Busch genuine spare parts
1x oil filter (OF), part no.: 0531 531 532

Remove lead seal (if authorized)
For oil type and oil capacity see Technical Data [ 31 ] and Oil [ 32 ].

7.5 Exhaust Filter Change

13 mm wrench

Remove demister (DR)

1x o-ring, part no.: 0482 509 012

Check oil level

Reapply lead seal

7.6 Air Heat Exchanger Cleaning
8 Overhaul

**NOTICE**
Improper assembly.

**Risk of premature failure!**
**Loss of efficiency!**

- It is highly recommended that any dismantling of the machine that goes beyond anything that is described in this manual should be done through Busch.

**WARNING**
Machines contaminated with hazardous material.

**Risk of poisoning!**
**Risk of infection!**

If the machine is contaminated with hazardous material:
- Wear appropriate personal protective equipment.

In case of the machine having conveyed gas that was contaminated with foreign materials which are dangerous to health:
- Decontaminate the machine as much as possible and state the contamination status in a ‘Declaration of Contamination’.

Busch will only accept machines that come with a completely filled in and legally binding signed ‘Declaration of Contamination’.
(Form downloadable from www.buschvacuum.com)

9 Decommissioning

- Shut down the machine and lock against inadvertent start up.
- Vent the connected lines to atmospheric pressure.

Version with water-oil heat exchanger:
- Turn off the water supply.
- Disconnect the water supply.
- Open the water bypass valve (WBV).
- Blow through the water cooling inlet with compressed air.
- Disconnect all connections.

If the machine is going to be stored:
- See Storage [9].

9.1 Dismantling and Disposal

- Drain the oil.
- Remove the exhaust filters.
- Remove the oil filter.
- Separate special waste from the machine.
- Dispose of special waste in compliance with applicable regulations.
- Dispose of the machine as scrap metal.
10 Spare Parts

![NOTICE]

Use of non-Busch genuine spare parts.

**Risk of premature failure!**

**Loss of efficiency!**

- The exclusive use of Busch genuine spare parts and consumables is recommended for the correct functioning of the machine and to validate the warranty.

![WARNING]

Use of non-Busch genuine spare parts.

**Risk of fire!**

- Only use Busch spare parts approved by Busch and suitable for oxygen application.

</tr>
</tbody>
</table>

If other parts are required:

- Contact your Busch representative for the detailed spare parts list.
11 Troubleshooting

**DANGER**

Live wires.

**Risk of electrical shock.**

- Electrical installation work must only be executed by qualified personnel.

**CAUTION**

Hot surface.

**Risk of burns!**

- Prior to any action requiring touching the machine, let the machine cool down first.

To know which oil has been filled in the machine, please refer to the nameplate (NP).
EU Declaration of Conformity

This Declaration of Conformity and the CE-mark affixed to the nameplate are valid for the machine within the Busch scope of delivery. This Declaration of Conformity is issued under the sole responsibility of the manufacturer. When this machine is integrated into a superordinate machinery the manufacturer of the superordinate machinery (this can be the operating company, too) must conduct the conformity assessment process for the superordinate machine or plant, issue the Declaration of Conformity for it and affix the CE-mark.

The manufacturer
Ateliers Busch S.A.
Zone Industrielle
CH-2906 Chevenez

declares that the machine(s) R 5 RA 0165 D; RA 0205 D; RA 0255 D; RA 0305 D has (have) been manufactured in accordance with the European Directives:

- ‘Machinery’ 2006/42/EC
- ‘Electromagnetic Compatibility’ 2014/30/EU

and following the standards.
