Installation and Operating Instructions

Side Channel Blowers
Samos SB 0050 - 1400 D0/D2

ATEX-Version

Busch Produktions GmbH
Schauinslandstr. 1
79689 Maulburg
Germany

0870145236 / 181122 / Original instructions / Modifications reserved
Preface

Congratulations on your purchase of the Busch side channel blower. With watchful observation of the field’s requirements, innovation and steady development Busch delivers modern vacuum and pressure solutions worldwide.

These operating instructions contain information for

- product description,
- safety,
- transport,
- storage,
- installation and commissioning,
- maintenance,
- overhaul,
- troubleshooting and
- spare parts

of the side channel blower.

The ATEX-drive motor is subject to a separate instruction manual.

For the purpose of these instructions, “handling” the side channel blower means the transport, storage, installation, commissioning, influence on operating conditions, maintenance, troubleshooting and overhaul of the side channel blower.

Prior to handling the side channel blower these operating instructions shall be read and understood. If anything remains to be clarified please contact your Busch representative!

Keep these operating instructions and, if applicable, other pertinent operating instructions available on site.

Technical Data

ATEX-classification, motor connection parameters, nominal speeds and allowed differential pressures are given on the nameplate of the side channel blower. More technical data, available sizes, versions and accessories are given in the current sales programme. In case of further questions please contact your Busch representative.
Product Description

Use

The side channel blower is intended for

– the suction
– the compression
– mixtures of dry non-aggressive and non-toxic gases and/or dust

according to the identification on the nameplate of the side channel blower (explanation see below)

Conveying media with a lower or higher density than air leads to an increased thermal and/or mechanical load on the side channel blower and is permissible only after prior consultation with Busch.

According to the directive 2014/34/EU (“ATEX 2014”) the side channel blower is made for the intended use in potentially explosive areas ac-cording to the data given on the nameplate of the side channel blower and on the data given on the nameplate of the drive motor.

The classification on the side channel blower is to be read as follows (interpretations of equipment categories and zones for information only; the relevant laws, directives and standards are literally binding; for temperature classes and explosion groups see E. Brandes, W. Möller “Sicherheitstechnische Kenngrößen, Band 1: Brennbare Flüssigkeiten und Gase”, ISBN 3-89701-745-8 (or equivalent source)):

If the classifications with regard to the conveyed gas/air or dust/air mixture on the one side and the environment of the side channel blower on the other side vary, the nameplate of the side channel blower reads the classification with regard to the conveyed gas/air or dust/air mixture first and next, after a slash, the classification with regard to the environment (example “3/2”).

Group II, for non-mining applications, explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas in the process gas not likely to occur in normal operation but, if it does occur, will persist for a short period only (equipment category 3, for zone 22), maximum permissible surface temperature for the dust/air mixtures in the process gas and in the environment greater equal 125 °C (acc. to EN 50281-2-1 or IEC 61241-2-1 resp.). Not for potentially explosive dust/air atmospheres.

Group II, for non-mining applications, explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas in the environment explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas in the environment explosively at risk. Violation of the limits its results in increased temperatures and thus puts the explosion safety of the side channel blower at risk.

The maximum allowed pressure on the pressure connection (d) is 2 bar abs (the nameplate of the side channel blower indicates the valid pressure). By means of process control it must be made sure that the maximum allowed pressure will not be exceeded.
Principle of Operation
The side channel blower works on the impulse principle, i.e. kinetic energy is transferred from the rotor to the conveyed medium and then is converted into pressure.

For the two stage version:
2 stages, both working on the principle described above, are installed in line in order to achieve a better ultimate/differential pressure.
The side channel blower compresses the inlet gas absolutely oil-free. A lubrication of the pump chamber is neither necessary nor allowed.

Cooling
The side channel blower is cooled by
- radiation of heat from the surface of the side channel blower
- the air flow from the fan wheel of the drive motor
- the process gas

Start Controls
The side channel blower comes without start controls. The control of the side channel blower is to be provided in the course of installation.

Safety
Intended Use
Definition: For the purpose of these instructions, “handling” the side channel blower means the transport, storage, installation, commissioning, influence on operating conditions, maintenance, troubleshooting and overhaul of the side channel blower.
The side channel blower is intended for industrial use. It shall be handled only by qualified personnel.
The allowed media and operational limits ( → page 3: Product Description) and the installation prerequisites ( → page 5: Installation Prerequisites) of the side channel blower shall be observed both by the manufacturer of the machinery into which the side channel blower is to be incorporated and by the operator.
In particular the intended use in potentially explosive areas, i.e. either inside the side channel blower or in its adjacency potentially explosive atmosphere can occur, requires that the side channel blower is equipped accordingly and carries the Ex-mark and that the associated documentation acc. to the directive 2014/34/EU is available.
The maintenance instructions shall be observed.
Prior to handling the side channel blower these instructions and operating instructions shall be read and understood. If anything remains to be clarified please contact your Busch representative!

Safety Notes
The side channel blower has been designed and manufactured according to state-of-the-art methods. Nevertheless, residual risks may remain. These operating instructions highlight potential hazards where appropriate. Safety notes are tagged with one of the keywords DANGER, WARNING and CAUTION as follows:

DANGER
Disregard of this safety note will always lead to accidents with fatal or serious injuries.

WARNING
Disregard of this safety note may lead to accidents with fatal or serious injuries.

Noise Emission

CAUTION
Disregard of this safety note may lead to accidents with minor injuries or property damage.

Transport

Transport in Packaging
Side channel blowers individually packed in cardboard boxes can be carried by hand.
Packed on a pallet the side channel blower is to be transported with a forklift.

Transport without Packaging
In case the side channel blower is packed in a cardboard box with inflated cushions:
- Remove the inflated cushions from the box
In case the side channel blower is in a cardboard box cushioned with rolled corrugated cardboard:
- Remove the corrugated cardboard from the box
In case the side channel blower is laid in foam:
- Remove the foam
In case the side channel blower is bolted to a pallet or a base plate:
- Remove the bolting between the side channel blower and the pallet/base plate
In case the side channel blower is fastened to the pallet by means of tightening straps:
- Remove the tightening straps
In case the side channel blower weighs less than 20 kg and comes without eyebolts for the attachment of lifting gear:
Version without handle:
- Grasp the side channel blower with both hands
Version with handle:
- Carry the side channel blower using the handle
In case the side channel blower comes with one or more eyebolts for the attachment of lifting gear:
- Make sure that the eyebolt is in faultless condition (replace a damaged, e.g. bent eyebolt with a new one)
- Make sure that the eyebolt is fully screwed in and tightened by hand
- Attach lifting gear securely to the eyebolt on the cylinder
- Attach the lifting gear to a crane hook with safety latch
Lift the side channel blower with a crane
In case the side channel blower was bolted to a pallet or a base plate:
◆ Remove the stud bolts from the rubber feet

Storage
Short-term Storage
◆ Make sure that the suction connection/gas inlet and the gas discharge/pressure connection are closed (leave the provided plugs in)
◆ Store the side channel blower
  – if possible in original packaging,
  – indoors,
  – dry,
  – dust free and
  – vibration free

Conservation
In case of adverse ambient conditions (e.g. aggressive atmosphere, frequent temperature changes) conserve the side channel blower immediately. In case of favourable ambient conditions conserve the side channel blower if a storage of more than 3 months is scheduled.
◆ Make sure that all ports are firmly closed; seal all ports that are not sealed with PTFE-tape, gaskets or o-rings with adhesive tape

Note: VCI stands for “volatile corrosion inhibitor”. VCI-products (film, paper, cardboard, foam) evaporate a substance that condenses in molecular thickness on the packed good and by its electro-chemical properties effectively suppresses corrosion on metallic surfaces. However, VCI-products may attack the surfaces of plastics and elastomers. Seek advice from your local packaging dealer! Busch uses CORTEC VCI 126 R film for the overseas packaging of large equipment.
◆ Wrap the side channel blower in VCI film
◆ Store the side channel blower
  – if possible in original packing,
  – indoors,
  – dry,
  – dust free and
  – vibration free.

For commissioning after conservation:
◆ Make sure that all remains of adhesive tape are removed from the ports
◆ Commission the side channel blower as described in the chapter Installation and Commissioning (page 5)

Installation and Commissioning
Installation Prerequisites

CAUTION
In case of non-compliance with the installation prerequisites, particularly in case of insufficient cooling:
Risk of damage or destruction of the side channel blower and adjoining plant components!
Risk of injury!
The installation prerequisites must be complied with.

Mounting Position and Space
◆ Make sure that the following ambient conditions will be complied with:
  – ambient temperature: –30 ... +40 °C
  – ambient pressure: atmospheric
  – altitude of location: up to 1000 m above sea level (at higher altitudes reduction of allowed differential pressure; to be agreed upon with Busch)
◆ Make sure that the environmental conditions comply with the protection class of the drive motor (according to the nameplate)
◆ Make sure that the side channel blower can neither inadvertently nor intentionally be stepped on and cannot be used as a support for heavy objects
◆ Make sure that the side channel blower cannot be hit by falling objects
The side channel blower can be operated with horizontal or vertical gas flow

◆ Make sure that the mounting base is even
◆ Make sure that there will a clearance of minimum 3.5 cm (up to construction size 140) or 5.5 cm (as of constructions size 200) between the fan hood and nearby walls/ceiling
◆ Make sure that there will be a clearance of minimum 2 cm (up to construction size 200), 3 cm (for construction size 310) or 4 cm (as of constructions size 530), respectively, between the cover and nearby walls/floor
In case of mounting with the drive motor in the uppermost position:
◆ Make sure that no objects can fall into the motor fan (cooling must not be impeded, though)
◆ Provide vibration insulating rubber feet to fasten the side channel blower to the floor
◆ Make sure that no heat sensitive parts (plastics, wood, cardboard, paper, electronics) will touch the surface of the side channel blower
◆ Make sure that the installation space or location is vented such that a sufficient cooling of the side channel blower is warranted

CAUTION
During operation the surface of the side channel blower may reach temperatures of more than 70 °C.
Risk of burns!
◆ Make sure that the side channel blower will not be touched inadvertently during operation, provide a guard if appropriate
Suction Connection/Gas Inlet

**CAUTION**

Intruding foreign objects or liquids can destroy the side channel blower.

In case the inlet gas can contain dust or other foreign solid particles:

- Make sure that a suitable filter (5 micron or less) is installed upstream the side channel blower
- Make sure that the filter is sufficiently ATEX-qualified (electrically conductive, with equipotential bonding etc.; also for non-combustible dusts!)
- Make sure that the suction line fits to the suction connection/gas inlet (e) of the side channel blower
- Make sure that the suction line is free of all foreign objects, e.g., welding scales

Gas Discharge

In case of vacuum operation:

- The discharged gas must flow without obstruction. It is not permitted to shut off or throttle the discharge line or to use it at as a pressurised air source.
- Make sure that the discharge line fits to the gas discharge (d) of the side channel blower
- Make sure that the pipe will cause no stress on the side channel blower’s connection, if necessary use an expansion joint
- Make sure that the line size of the discharge line over the entire length is at least as large as the gas discharge (d) of the side channel blower

In case the length of the discharge line exceeds 2 m it is prudent to use larger line sizes in order to avoid a loss of efficiency and an overload of the side channel blower. Seek advice from your Busch representative!

In case of mobile installation:

- Provide the electrical connection with grommets that serve as strain-relief

Electrical circuits in zone 1 (outside) shall be executed intrinsically safe in protection class ib acc. to EN 50020:2002.

Installation

Mounting

- Make sure that the Installation Prerequisites (page 5) are complied with
- Fasten the side channel blower at its location

Connecting Electrically

**WARNING**

Risk of electrical shock, risk of damage to equipment.

Electrical installation work must only be executed by qualified personnel that knows and observes the following regulations:

- IEC 364 or CENELEC HD 384 or DIN VDE 0100, respectively,
- IEC-Report 664 or DIN VDE 0110,
- BGV A2 (VBG 4) or corresponding national accident prevention regulation.

- Connect the drive motor according to the installation instructions for the drive motor (separate leaflet)
- Electrically connect the drive motor
- Connect the protective earth conductor
- Provide an overload protection according to EN 60204-1 for the motor.
- The electrical installation must comply with applicable national and international standards.

**CAUTION**

Operation in the wrong direction of rotation can destroy the side channel blower in short time.

Risk of explosion!

Prior to starting-up it must be made sure that the side channel blower is operated in the proper direction.

**Installation and Commissioning**

SB 0050 - 1400 D0/D2 ATEX-Version

0870145236 / 181122
Determine the intended direction of rotation with the arrow (stuck on or cast)

- "Bump" the drive motor
- Watch the fan wheel of the drive motor and determine the direction of rotation just before the fan wheel stops

If the rotation must be changed:
- Switch any two of the drive motor wires

**WARNING**

Operating with variable-frequency drive.

Risk of injury!

Risk of damage to the machine!

Only use variable-frequency drive in accordance with accompanying inspection document for inverter-fed explosion-proof motors.

When using machines with variable-frequency drives, the maximum rotation speed written on the nameplate must be adhered to.

**Connecting Lines/Pipes**

- Connect the suction line
- Installation without suction line:
  - Make sure that the gas inlet (e) is open
  - Connect the discharge line
  - Make sure that all provided covers, guards, hoods etc. are mounted
  - Make sure that cooling air inlets and outlets are not covered or obstructed and that the cooling air flow is not affected adversely in any other way
- In case the side channel blower comes with an eyebolt for the attachment of lifting gear:
  - Make sure that the eyebolt is firmly tightened

**Recording of Operational Parameters**

As soon as the side channel blower is operated under normal operating conditions:
- Measure the drive motor current and record it as reference for future maintenance and troubleshooting work

**Operation Notes**

**Use**

**WARNING**

The side channel blower is designed for operation under the conditions described below.

- In case of disregard risk of explosion!

- The side channel blower must only be operated under the conditions described below.

The side channel blower is intended for:
- the suction
- the compression
- mixtures of dry non-aggressive and non-toxic gases and/or dust according to the identification on the nameplate of the side channel blower (explanation see below)

Conveying media with a lower or higher density than air leads to an increased thermal and/or mechanical load on the side channel blower and is permissible only after prior consultation with Busch.

According to the directive 2014/34/EU ("ATEX 2014") the side channel blower is made for the intended use in potentially explosive areas according to the data given on the nameplate of the side channel blower and on the data given on the nameplate of the drive motor.

The classification on the side channel blower is to be read as follows:

- Interpretations of equipment categories and zones for information only; relevant laws, directives and standards are literally binding
- Only temperature classes and explosion groups (equipment category 3, for zone 2) for flammable dust in air not likely to occur in normal operation but, if it does occur, will persist for a short period only (equipment category 3, for zone 1); type of protection constructional safety, by gases temperature class T3 in the process gas and in the environment
- Not for potentially explosive dust/air atmospheres

**Il 3/2G c T3**

Group II, for non-mining applications, explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas in the process gas not likely to occur in normal operation but, if it does occur, will persist for a short period only (equipment category 3, for zone 2), in the environment explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas, vapour or mist likely to occur in normal operation occasionally (equipment category 2, for zone 1), type of protection constructional safety, for gases temperature class T3 in the process gas and in the environment

**Il 3/2D c T 125°C**

Group II, for non-mining applications, in the process gas explosive atmosphere in the form of a cloud of combustible dust in air not likely to occur in normal operation but, if it does occur, will persist for a short period only (equipment category 3, for zone 22), in the environment explosive atmosphere in the form of a cloud of combustible dust in air likely to occur in normal operation occasionally (equipment category 2, for zone 21), type of protection constructional safety, maximum permissible surface temperature for the dust/air mixtures in the process gas and in the environment equal or greater 125 °C (acc. to EN 50281-2-1 or IEC 61241-2-1 resp.). Not for potentially explosive gas atmospheres

**Il 3G T3**

Group II, for non-mining applications, in the process gas and in the environment explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas (in the environment also vapour or mist) not likely to occur in normal operation but, if it does occur, will persist for a short period only (equipment category 3, for zone 2), for gases temperature class T3 in the process gas and in the environment

Not for potentially explosive dust/air atmospheres
The nominal value (=reference value for performance data) for the
operating conditions shall be agreed upon with Busch.

Depending on the operating state the side channel blower may
emit noise of high intensity.

Depending on the construction size the side channel blower may
emit noise of high intensity.

Make sure that all provided covers, guards, hoods etc. remain
mounted

Make sure that protective devices will not be disabled

Make sure that cooling air inlets and outlets will not be covered or
obstructed and that the cooling air flow will not be affected ad-
derately in any other way

Make sure that the installation prerequisites (page 5: Installation
Prerequisites) are complied with and will remain complied with,
particularly that a sufficient cooling will be ensured

**Maintenance**

![Warning]

**WARNING**

The approval of the side channel blower for use in potentially ex-
plode areas remains valid only if the maintenance is conducted
regularly according to the maintenance schedule below and genu-
ine spare parts and consumables, approved for use in potentially
explosive areas by Busch, are used exclusively.

Maintenance work must be executed by qualified personnel, spe-
cially instructed in the maintenance of this type of side channel
blower by Busch.

![Danger]

**DANGER**

In case the side channel blower conveyed gas that was contami-
nated with foreign materials which are dangerous to health, harm-
ful material can reside in filters.

Danger to health during inspection, cleaning or replacement of
filters.

Danger to the environment.

Personal protective equipment must be worn during the handling of
contaminated filters.

Contaminated filters are special waste and must be disposed of
separately in compliance with applicable regulations.

![Caution]

**CAUTION**

During operation the surface of the side channel blower may reach
temperatures of more than 70 °C.

Risk of burns!

The side channel blower shall be protected against contact during
operation, it shall cool down prior to a required contact or heat pro-
tection gloves shall be worn.

![Caution]

**CAUTION**

During operation the surface of the side channel blower may reach
temperatures of more than 70 °C.

Risk of burns!

Prior to disconnecting connections make sure that the connected
pipes/lines are vented to atmospheric pressure

![Caution]

**CAUTION**

During operation the surface of the side channel blower may reach
temperatures of more than 70 °C.

Risk of burns!

Make sure that cooling air inlets and outlets will not be covered or
obstructed and that the cooling air flow will not be affected ad-
derately in any other way

Make sure that the installation prerequisites (page 5: Installation
Prerequisites) are complied with and will remain complied with,
particularly that a sufficient cooling will be ensured
Maintenance Schedule

Note: The maintenance intervals depend very much on the individual operating conditions. The intervals given below are upper limits that must not be exceeded. Particularly heavy duty operation, such like high dust loads in the environment or in the process gas, other contaminations or ingress of process material, can make it necessary to shorten the maintenance intervals significantly.

Monthly:

- Make sure that the side channel blower is shut down and locked against inadvertent start up

In case an inlet air filter is installed:
- Check the inlet air filter, if necessary replace

In case of operation in a dusty environment:
- Clean as described under → page 8: Every 6 Months:

Every 6 Months:

- Make sure that the housing is free from dust and dirt, clean if necessary
- Make sure that the side channel blower is shut down and locked against inadvertent start up

Note: Any kind of deposit on the side channel blower compromises the explosion safety of the side channel blower.

- Clean the fan cowling, the fan wheel, the ventilation grille and the cooling fins
- Check the electrical connection

Every Year:

- Make sure that the side channel blower is shut down and locked against inadvertent start up

In case an inlet air filter is installed:
- Replace the inlet air filter

In case an inlet screen is installed:
- Check the inlet screen, clean if necessary

Every 2 Years:

- Have the bearings replaced by the Busch service

Overhaul

WARNING

Improper work on the side channel blower puts the operating safety at risk.

Risk of explosion!

Approval for operation will be void!

Any dismantling of the side channel blower that is beyond of what is described in this manual must be done by specially trained Busch service personnel only.

## Troubleshooting

### WARNING
Vacuum pump/ Compressor/ Vacuum and pressure pump/ Blower for use in potentially explosive atmospheres.

The side channel blower must only be operated in faultless condition.

Risk of explosion in case of operation of faulty equipment!

A faulty side channel blower must immediately be removed from service.

In case of faults the cause of which cannot be determined the Busch service must be contacted.

### WARNING
Risk of electrical shock, risk of damage to equipment.

Electrical installation work must only be executed by qualified personnel that knows and observes the following regulations:

- IEC 364 or CENELEC HD 384 or DIN VDE 0100, respectively,
- IEC-Report 664 or DIN VDE 0110,
- BGV A2 (VBG 4) or equivalent national accident prevention regulation.

### CAUTION
During operation the surface of the side channel blower may reach temperatures of more than 70 °C.

Risk of burns!

Let the side channel blower cool down prior to a required contact or wear heat protection gloves.

|                                                                      | Repair the side channel blower (Busch service)                               |
| The side channel blower runs very hot                                | Insufficient air ventilation                                                  |
|                                                                      | Make sure that the cooling of the side channel blower is not impeded by dust/dirt.  
  Clean the fan cowling, the fan wheel, the ventilation grille and the cooling fins.  
  Install the side channel blower in a narrow space only if sufficient ventilation is ensured |
| Ambient temperature too high                                         | Observe the permitted ambient temperatures                                    |
| Temperature of the inlet gas too high                                | Observe the permitted temperatures for the inlet gas                         |
| Insufficient gas transfer                                            | Check the process conditions                                                  |
| Mains frequency or voltage outside tolerance range                   | Provide a more stable power supply                                            |
| Partial clogging of filters or screens                               | Remove the clogging                                                          |
| Partial clogging in the suction, discharge or pressure line         |                                                                              |
| Long suction, discharge or pressure line with too small diameter     | Use larger diameter                                                           |
EC-Declaration of Conformity

Note: This Declaration of Conformity and the CE-mark affixed to the nameplate are valid for the machine within the Busch scope of delivery. This Declaration of Conformity is issued under the sole responsibility of the manufacturer.

When this machine is integrated into a superordinate machinery the manufacturer of the superordinate machinery (this can be the operating company, too) must conduct the conformity assessment process for the superordinate machine or plant, issue the Declaration of Conformity for it and affix the CE-mark.

Declare that the vacuum pumps SB 0050 - 1400 D0/D2 ATEX-Version

with a serial number BN10...

Documentation No.: T611145612

Audit: CE0637

has (have) been manufactured in accordance with the European Directives:

- ‘Machinery’ 2006/42/EC
- ‘ATEX Directive’ 2014/34/EU for use in potentially explosive areas according to classification written on the machine nameplate
- ‘Electromagnetic Compatibility’ 2014/30/EU

and following the standards.
